McAfee, Inc., headquartered in Santa Clara, California, is the world's largest dedicated security technology company. McAfee is relentlessly committed to tackling the world's toughest security challenges. The company delivers proactive and proven solutions and services that help secure systems and networks around the world, allowing users to safely connect to the Internet, browse, and shop the web more securely. Backed by an award-winning research team, McAfee creates innovative products that empower home users, businesses, the public sector, and service providers by enabling them to prove compliance with regulations, protect data, prevent disruptions, identify vulnerabilities, and continuously monitor and improve their security.

### Customers

McAfee customers range from government agencies to millions of home users. Businesses range from the smallest startups to the largest enterprises. People buy McAfee® technology online and from retail stores around the world, or they get protection for mobile devices through cell phone carriers or Internet service providers (ISPs). Most of our corporate customers buy through McAfee-authorized partners who customize solutions to bring them the right protection for their specific needs delivered as software appliances or a service in the cloud.

- Over 100 million mobile devices have shipped with McAfee protection
- Over 60 million corporate users managed under McAfee ePolicy Orchestrator® (ePO™)
- McAfee SiteAdvisor® web protection has been downloaded more than 170 million times
- Service provider partners include AOL, Dell, Sony, NTT DoCoMo, Sony, Toshiba, Samsung, Sharp, and Telstra Markets

### Markets

#### Home

McAfee secures home computers with a proven combination of ease and effectiveness. Millions of consumers rely on our solutions, which include an online subscription service that keeps protection up to date and provides the latest technology.

McAfee shields consumers from identity theft, phishing scams, spyware, malicious websites, and other threats that endanger the online experience. Solutions include McAfee Total Protection (ToPS) with McAfee SiteAdvisor Plus, McAfee Family Protection, McAfee Internet Security Suite with SiteAdvisor, and McAfee VirusScan® Plus with SiteAdvisor.

#### Small Business

The McAfee portfolio of integrated solutions and services for small business provides always-up-to date protection for desktops, servers, and networks. In providing security-as-a-service (SaaS), we also give

small businesses the confidence of having full-time security expertise without the need to hire IT staff. Our easy-to-manage products protect small businesses against a wide array of threats, including malware, spam, and unauthorized network access.

### Medium Business

Midsized businesses with 50 to 1,000 users generally have full-time IT staff but don't have much time to spend on security. McAfee offers growing businesses smart, simple, and secure solutions that provide better protection and help them stay compliant.

### Enterprise

Large businesses can optimize their security investments and proactively protect their most important assets with our strategic, pragmatic approach to security. The McAfee approach to risk management and compliance has become the de facto standard for enterprise security, with solutions to protect the entire infrastructure from endpoints to the network to mobile devices. McAfee solutions also help enterprises manage risk and meet regulatory, industry, and internal compliance demands more effectively and efficiently. IT professionals use our methodology—from policy creation to protection strategies to compliance reporting—to determine the right level of security for their organizations.

### Integrated, simple-to-manage solutions

From phishing scams to cyberespionage, information security threats continue to grow increasingly sophisticated, complex, and difficult to detect and intercept. Today's security challenges include spam, spyware, data loss, host intrusion, management, mobile malware, social networking exploits, phishing scams, and threats that target Web 2.0 applications.

From servers to routers and laptops to PDAs, every device is a potential target and entry point. McAfee Avert Labs, our global security research team, identified more than 1.2 million pieces of malware in the first half of 2009, up from 1.5 million in all of 2008, signaling that 2009 will be a record-breaking year for malware. Many of these multivector threats exploit vulnerabilities in networks and systems. Combating these exploits requires integrated protection because even if you stop an attack at the front door, it may come in through the back door.

Offering the most comprehensive security portfolio in the industry, McAfee delivers proactive, integrated protection for networks, systems, data, and the web backed by 24/7 threat research from McAfee Avert Labs and McAfee Global Intelligence to anticipate and defend you against the next wave of malware.

Our portfolio provides single-console, centralized management with McAfee ePO software to optimize your security investment by improving operational efficiencies and protection. ePO helps organizations keep systems compliant and manage interdependent layers of protection. With McAfee you can feel confident in knowing you are covered around the clock and around the world, so that you are free to do the things that are important to you.

### McAfee Professional Services and Support

McAfee professional services, including consulting, product education, and award-winning technical support, help you make the most out of your McAfee solutions and keep your protection up to date.

We work with highly trained and experienced partners to help customers optimize our solutions. To supplement our partner services, McAfee Foundstone® Professional Services brings an objective perspective and a unique combination of tools and training to help identify and implement the most effective solutions for meeting your particular needs.

At McAfee Customer Service and Technical Support, our certified security specialists, provide support with a wealth of knowledge and resources. Support options include 24/7/365 access, response charters, and proactive optimization.

### Research

McAfee Avert Labs is our top-ranked research organization with more than 350 researchers on four continents. The McAfee Avert Labs blog offers a view into up-to-the-minute security research. Using global threat intelligence, McAfee Avert Labs works 24/7 to anticipate and defend against the next wave of malware.

### Patents

McAfee has been awarded more than 439 patents and many more patents pending. Patents allow us to build superior solutions, defend our innovations, and generate licensing revenue.
