

McAfee Enterecept[®] Complete Implementation

Objective

The McAfee Enterecept Complete Implementation service is designed to provide customers with everything they need to fully deploy McAfee Enterecept. This full-scale service consists of two phases; the Setup and Configuration phase and a Prevention Mode Readiness phase that ensure proper configuration and operations.

Tasks Performed

McAfee Enterecept Strategy Development

Our consultant will work with your staff to develop a strategy for the deployment and use of Enterecept in both Warning and Protection mode. Specific areas addressed include:

- Development of a strategy for the complete rollout of Enterecept to all servers within the enterprise
- Server security policy development
- Strategy for agent deployment to create minimal impact on server performance

Setup and Configuration

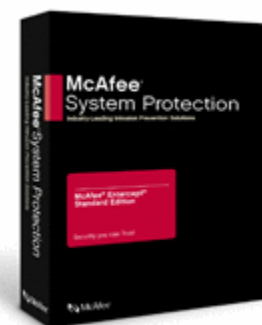

After the development of the McAfee Enterecept strategy, the consultant will deploy, configure, and test the technology with customer administrators. This interactive learning session will provide customers with an Enterecept deployment customized to their specific requirements and solid knowledge on how to customize the product as their requirements evolve with use. Specific tasks performed are:

- Install and configure Enterecept Management Server on 1 Windows server
- Install and configure Enterecept Consoles to connect to Enterecept Management Server.
- Install and configure Enterecept Agents to connect to Enterecept Management Server.
- Configure default security policies for proper implementation of protection mode reactions.
- Define User accounts and privilege access levels for all appropriate Enterecept System Administrators.
- Configure Management server for appropriate user notifications – Email, Pager, SNMP Traps and Spawn process.
- Configure Management Server to acquire signature and agent version updates.
- Define and Configure Management Server Advanced properties to match customers environmental requirements

Prevention Mode Readiness

- Monitor incoming agent security event data and define user and event based exceptions accordingly.

- Define and configure custom security policies for proper implementation of protection mode reactions.
- Adjust agent signature list according to customer's specific environmental security needs.
- Define user accounts and privilege access levels for all appropriate Enterecept System Administrators.
- Configure Management server for user notifications – Email, Pager, SNMP Traps and Spawn process.
- Configure Management Server to acquire signature and agent version updates.
