

McAfee ePolicy Orchestrator® Strategic Planning

Objective

This service provides a strategic design and plan for comprehensive and proactive virus outbreak protection with ePolicy Orchestrator. The analysis performed includes an assessment of current outbreak prevention measures through understanding the company environment and strategic anti-virus design and configuration recommendations based on McAfee proprietary best practices. The goals of this service are to provide our clients with the knowledge required to economically provide comprehensive protection against malicious code while causing minimal interruption in business practices.

Tasks Performed

At the beginning of this engagement, the consultant will arrive on-site to conduct an initial meeting with all relevant client personnel. A list of topics that we will focus on is as follows:

1. Define specific objectives and goals for this service
2. Develop and articulate the strategy for the engagement
3. Review the customer network environment
4. Review any AV products currently deployed
5. Review all product requirements
6. Review deliverables for the end of the engagement

Assessment Phase

After the initial meeting, the Expert Services consultant will begin the assessment phase of this project. Tasks associated with this phase of the project will seek to provide the relevant context for the design phase based on the organization's current business practices and IT environments. The consultant will obtain a detailed understanding of the business and technical factors that may affect product placement and development recommendations. Assessment considerations reviewed during this project will include:

- Change management process
- Integration test lab
- Single site environment factors
- Multiple site environment factors
- Bandwidth considerations
- Customer node review
- Review of network and desktop operating systems
- Review of existing Anti-Virus server and desktop products
- Review of existing Anti-Virus gateway products

Design Phase

After the Assessment phase of this project is complete, the consultant will develop and define the requirements and architecture for the proposed solution. The design recommendations provided during this project will include:

- Identification of new components that will affect the IT environment
- Develop and test uninstall methods
- Develop and test deployment strategy
- Develop detailed deployment

Reports Generated

At the end of this engagement, our Experts will provide the following deliverables:

- System design criteria
- Final system design document
- Detailed product deployment Project Plan
- Customized deployment methodology and configuration recommendations based on product functionality and proven best practices

The reports will detail a recommended deployment plan, acceptance testing and deployment methodologies specifically developed based on your current environment and years of product and consulting experience obtained during large enterprise projects.

To Be Completed Prior to Start of Session

The client is responsible for providing the following:

- Access to the relevant client personnel
- Network design documentation
- Access to phone, internet connection, and workspace
- Physical access to all necessary areas of the company network
- Any relevant anti-virus history
