

McAfee GroupShield® Jump Start - Domino

Objective

The GroupShield Domino Jump Start is designed to provide our clients with planning, implementation, and management strategy expertise to ensure the best possible product value from GroupShield. The GroupShield Jump Start includes deployment planning and installation of the GroupShield Product. As part of this service, McAfee Expert Services will also provide hands-on knowledge transfer for GroupShield and Outbreak Manager usage and strategy tailored to the client environment.

Tasks Performed

The Consultant will conduct an initial meeting with all relevant client personnel. Listed below are the areas of focus for this meeting:

- A comprehensive analysis of both hardware and software for the Domino environment
- Review architectural diagrams or other documentation depicting the current Domino environment and any future changes
- Review existing Domino Configuration and performance characteristics
- Discuss network bandwidth specifications across LAN/WAN links
- Review the present Domino specific information, such as amount of RAM, Hard disk and CPU power, version number and MS Service Pack level
- Review current anti-virus software, if any, deployed on the Domino servers
- Identify any software or network protocols that already exist in the Customer environment that might cause conflicts with the GSD software rollout
- Determine impact and/or software required on Domino clients
- Review any existing alerting mechanisms in the Customer environment and provide a recommendation to support GSD alerting
- Discuss distribution requirements and recommend a distribution mechanism for GSD product software upgrades and DAT signature file updates
- Setup and Configuration
- Install and configure GroupShield for Domino on a test (non-production) server
- Verify installation, detection, and cleaning functionality using EICAR test virus
- Set-up initial alerting mechanism and verify functionality
- Install and configure GroupShield for Domino on a test (non-production) server. The first production server should be allowed to run for several hours (of peak time) before proceeding to the next server

- Verify the functionality of GSD on the first production server, the consultant will perform remote installs to up to six (6) other Domino servers (on the LAN or across the WAN)
- Work with the Customer Domino Administrator to monitor and tune the performance of the GSD software in the production network
- The consultant will recommend and implement a configuration of GSD to alert the Domino Administrator of found viral infections (e.g., advise on Outbreak Manager (OBM) settings - assist in establishing one OBM rule)
- The consultant will implement a procedure to update the GSD DAT virus signature files and product software
