

McAfee GroupShield for Lotus Domino

Windows Edition

Secure your Lotus Domino server from spam, viruses, and spyware

Viruses and worms can spread through email attachments and data files that are routinely shared via your Lotus Domino databases. McAfee GroupShield protects against these threats, blocks spam, and filters messages containing unwanted content.

KEY ADVANTAGES

- **Keep your system up and running**
Prevent viruses and worms from propagating via Domino.
- **Keep your people productive**
Block spam.
- **Single-console management**
Manage GroupShield and other McAfee security products with McAfee ePolicy Orchestrator or ProtectionPilot. Get control, management, and reporting from one powerful console.
- **Protect your information**
Filter incoming and outgoing emails to preserve information security and reduce corporate liability.
- **Intuitive GUI**
New user interface provides rich, intuitive, in-product graphical reporting, charts, and real-time email traffic statistics.

Protect your resources

McAfee® GroupShield® for Lotus Domino provides anti-virus, anti-spyware, anti-spam, and content security for Lotus Domino servers. With advanced threat detection and prevention technologies, GroupShield prevents malicious threats from damaging your Domino servers or infecting your systems. GroupShield includes comprehensive content filtering that allows you to control what gets sent or received by your users. The optionally licensed McAfee Anti-Spam for GroupShield blocks spam very effectively.

Unbeatable virus detection and cleaning

McAfee GroupShield uses the award-winning McAfee scanning engine to detect, clean, and block viruses, worms, Trojans, and other potentially unwanted programs. Scans of your Lotus Domino files are fast and easy with in-memory and incremental on-demand scans. In-memory scanning ensures that items can be scanned without having to be written to disk, which reduces server load. The incremental on-demand scans focus on documents created or updated since the last scheduled scan.

Content filtering

GroupShield allows you to filter messages based on size, attachment type, or contents. This lets you prevent inappropriate information from coming into your network, as well as guard against inappropriate or sensitive information traversing or leaving your network. You can block or quarantine messages that contain specific words or phrases in the subject line, message body, or attachments. Ensure compliance with corporate email policies by adding disclaimers and filtering by file size.

Block spam

GroupShield for Domino includes a built-in anti-spam capability which is optionally licensed. Third-party tests show that McAfee anti-spam blocks approximately 98 percent of spam, with no false positives. Advanced spam management features such as McAfee Quarantine Manager lets your users receive daily spam digests, set up blacklists and whitelists, and search the quarantine.

Manage your security

GroupShield for Domino can be managed via its built-in HTML interface, or via a Lotus Notes client, or via McAfee's centralized management consoles—McAfee ePolicy Orchestrator® (ePO™) or McAfee ProtectionPilot.™ With ePO, you can manage multiple McAfee security products from a single console and create detailed graphical reports. ePO lets you remotely deploy GroupShield, saving time and valuable resources.

SPECIFICATIONS

Release 7.0 (Windows® only)

- **System requirements:** Microsoft® Windows 2000 or 2003 Server, Windows 2000 Advanced Server with SP4 or later, Microsoft Windows 2003 Enterprise Server with SP2 or later
- **Memory:** Minimum 512 MB RAM and recommended 1 GB RAM
- **Disk space:** Minimum 1 GB per partition, recommend 1.5 GB per partition
- **Hardware:** Intel Pentium
- **Supported Lotus Domino versions:**
 - Lotus Domino version 6.0.2 or later
 - Lotus Domino version 7.0.2
- **Web browser:** Microsoft Internet Explorer 6.0 or above set as the default browser

Features

- **Advanced anti-virus technology**
McAfee anti-virus technology blocks viruses, spyware, and other malicious code; advanced heuristics and generic detection identifies unknown viruses and threats.
- **Effective content filtering**
With GroupShield, you can filter and block files and messages based on various criteria: attachment file names, file types, subject line, message body, attachment content (over 300 file types supported), or size. Create policies based on user or group.
- **Central management and reporting**
Because GroupShield is integrated with ePolicy Orchestrator and ProtectionPilot, you can manage it and other McAfee security products from a single console and create detailed graphical reports.
- **Effective spam and phish blocking**
Block incoming spam and phishing messages with minimal false positives using the optionally licensed McAfee Anti-Spam for GroupShield.
- **Always up to date**
Protection from viruses is only as effective as the last update. GroupShield features AutoUpdate, which enables the latest virus definition (DAT) files and spam rules to be automatically downloaded via HTTP, FTP, network file share, or ePolicy Orchestrator.
- **In-memory scanning**
GroupShield for Lotus Domino scans items in memory without writing them to disk; you get lightning-fast scans and reduced performance impact.
- **Advanced spam management features**
McAfee Quarantine Manager provides centralized management of spam and other forms of quarantined mail across multiple Domino servers. Users can manage their personal whitelists, blacklists, and spam quarantines.
