

Protect what you value.

McAfee GroupShield for Microsoft Exchange

Secure your Microsoft Exchange server from spam, viruses, and spyware

Viruses and worms can spread through email attachments and data files that routinely are shared via your Microsoft Exchange public folders. McAfee GroupShield protects against these threats, blocks spam, and filters messages containing unwanted content.

KEY ADVANTAGES

Keep your system up and running

Prevent viruses and worms from propagating via Exchange.

Keep your people productive

Block spam.

Single-console management

Manage GroupShield and other McAfee security products with McAfee ePolicy Orchestrator. Get control, management, and reporting from one powerful console.

Protect your information

Filter incoming and outgoing emails to preserve information security and reduce corporate liability.

Intuitive GUI

New user interface provides rich reporting, charts, and real-time email traffic statistics.

Protect Your Resources

McAfee GroupShield® for Microsoft® Exchange provides anti-virus, anti-spyware, anti-spam, and content security for Microsoft Exchange servers. With advanced threat detection and prevention technologies, GroupShield prevents malicious threats from damaging your Exchange servers or infecting your systems. GroupShield includes comprehensive content filtering that allows you to control what gets sent or received by your users. The optionally licensed McAfee Anti-Spam for GroupShield blocks spam effectively.

Unbeatable Virus Detection and Cleaning

McAfee GroupShield uses the award-winning McAfee scanning engine to detect, clean, and block viruses, worms, Trojans, and other potentially unwanted programs. Scans of your Microsoft Exchange files are fast and easy with in-memory and incremental on-demand scans. In-memory scanning ensures that items can be scanned without having to be written to disk, which reduces server load. The incremental on-demand scans focus on documents created or updated since the last scheduled scan.

Content Filtering

GroupShield allows you to filter messages based on size, attachment type, or contents. This lets you prevent inappropriate information from coming into your network, as well as guard against inappropriate or sensitive information traversing or leaving your network. You can block or quarantine messages that contain specific words or phrases in the subject line, message body, or attachments. Ensure compliance with corporate email policies by adding disclaimers and filtering by file size.

Block Spam

GroupShield includes a built-in, optionally licensed anti-spam capability. Third-party tests show that McAfee anti-spam blocks approximately 98 percent of spam, with no false positives. Advanced spam management features such as McAfee Quarantine Manager lets your users receive daily spam digests, set up blacklists and whitelists, and search the quarantine.

Manage Your Security

GroupShield can be managed via its built-in HTML interface, or via McAfee's centralized management console—McAfee ePolicy Orchestrator® (ePO™). With ePO, you can manage multiple McAfee security products from a single console and create detailed graphical reports. ePO lets you remotely deploy GroupShield, saving time and valuable resources.

SPECIFICATIONS

Processor

- Intel x64 architecture-based processor that supports Intel Extended Memory 64 Technology (Intel EM64T)
- AMD x64 architecture-based processor with AMD 64-bit technology
- Intel x86 architecture-based processor (only on Exchange Server 2003)

Memory

- Minimum: 512 MB RAM
- Recommended: 1 GB RAM available

Hard disk space

- Minimum: 740 MB

Operating system

- Windows® 2000 Advanced Server with Service Pack 4
- Windows 2003 Standard/Enterprise Server (32-bit)
- Windows 2003 Standard/Enterprise Server R2 (32-bit)
- Windows 2003 Standard/Enterprise Server (64-bit)
- Windows 2003 Small Business Server (32-bit)
- Windows 2003 Datacenter Server (32-bit)
- Windows 2003 Datacenter Server (64-bit)

Supported Exchange Servers

- Microsoft Exchange Server 2003 with Service Pack 2
- Microsoft Exchange Server 2007

Supported browsers

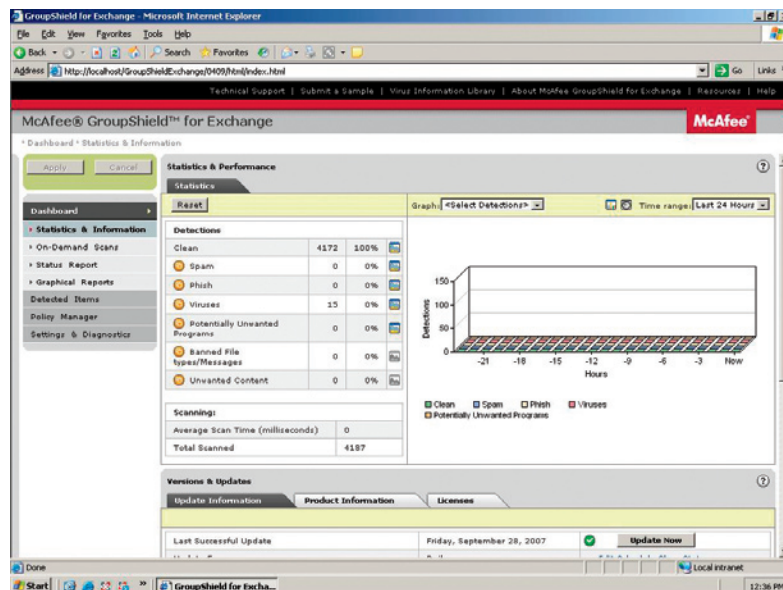

- Microsoft Internet Explorer version 6 and above
- Netscape Navigator version 9.0
- Mozilla version 2.0

Screen Resolution

- 1024 x 768
- For the best display, set the color resolution to 24-bit or higher

Features

- **Advanced anti-virus technology**
McAfee anti-virus technology blocks viruses, spyware, and other malicious code; advanced heuristics and generic detection identify unknown viruses and threats.
- **Effective content filtering**
With GroupShield, you can filter and block files and messages based on various criteria: attachment file names, file types, subject line, message body, attachment content (over 300 file types supported), or size. Create policies based on user or group.
- **Central management and reporting**
Because GroupShield integrates with ePolicy Orchestrator, you can manage it and other McAfee security products from a single console and create detailed graphical reports.
- **Effective spam and phishing blocking**
Block incoming spam and phishing messages with minimal false positives using the optionally licensed McAfee Anti-Spam for GroupShield.
- **Always up to date**
Protection from viruses is only as effective as the last update. GroupShield features AutoUpdate, which enables the latest virus definition (DAT) files and spam rules to be automatically downloaded via HTTP, FTP, network file share, or ePolicy Orchestrator.
- **In-memory scanning**
GroupShield scans items in memory without writing them to disk; you get lightning-fast scans and reduced performance impact.
- **Advanced spam management features**
McAfee Quarantine Manager provides centralized management of spam and other forms of quarantined mail across multiple Microsoft Exchange servers. Users can manage their personal whitelists, blacklists, and spam quarantines.
