

McAfee Managed Mail Protection

Always On, Automatic Mail Protection

Is spam causing lost productivity in your workplace? In today's multi-faceted networking environments, it is essential to ensure that content entering and leaving the organization meets company security policies and privacy regulations. But in the world of small- to medium-size businesses, there is barely enough time and resources to handle day-to-day operations—let alone the often complex management of e-mail security and spam protection.

Industry studies estimate that spam e-mail accounts for 25–50 percent of all e-mails received by organizations worldwide. Junk e-mail is forecasted to cost U.S. corporations upward of \$10 billion in 2003. Fortunately, you now have a powerful tool and a strong business partner to fight off this modern-day nuisance.

McAfee® Managed Mail Protection quickly filters spam, inappropriate content, and viruses away from your network without the cost and hassle typically associated with e-mail security. Compatible with all e-mail platforms (Exchange, Outlook, and Lotus), Managed Mail Protection does not require additional personnel resources or the purchase of additional hardware and software to manage daily security operations, which lowers the total cost of ownership of e-mail security. With comprehensive, *in-the-cloud* scanning, inbound and outbound e-mails are first redirected to McAfee to scan for spam, viruses, and inappropriate content before reaching the gateway or before leaving the network. Managed Mail Protection also provides additional protection with visibility reports accessible from any Web browser through McAfee's secured Web portal. Visibility is crucial to understanding your company's e-mail status and throughput statistics quickly and easily. With Managed Mail Protection, you'll receive **always on, automatic mail protection** against spam, inappropriate content, and viruses, so you can focus on your business instead.

Managed by McAfee

There's no hardware to buy, no software to install, and no security knowledge necessary! All this while increasing employee productivity and lowering your total cost of e-mail security ownership? Yes! Outsource your e-mail security concerns to McAfee Managed Mail Protection, and you can forget about your security headaches and sleep soundly at night. Leave the administrative hassles to the experts at McAfee, while lowering maintenance costs and operational issues associated with a comprehensive e-mail solution. As part of McAfee's Secure Content Management solutions,

Managed Mail Protection delivers integrated, flexible technology, ensuring that a company's inbound and outbound communications are cleaned and secured. Enforcing secure content policies with Managed Mail Protection automatically safeguards your critical communications, while optimizing resources, increasing productivity, and preventing internal policy compromises. With Managed Mail Protection, one security service offers multiple levels of managed protection with the trusted technology from McAfee.

Reduce the Effects of Spam

From friendly to malicious spam, approximately 25–50 percent of all e-mails received by organizations are spam. Spam can cost companies between \$600 and \$1,000 per year per employee in lost productivity. There are four key areas where spam e-mails are costly to your organization.

- **Lost Productivity**—The amount of time your employees waste reading and dealing with these unwanted e-mails is the time they did not spend doing productive work. Lost productivity for users is estimated to be the largest spam-associated cost for companies
- **Inappropriate Content**—Employees may receive e-mails that may be deemed offensive and is most likely in violation of company policy. Messages of adult, racist, or other inappropriate content could have adverse legal consequences for your company
- **Consumption of IT Resources**—Spam e-mails can take up considerable bandwidth in existing networks and personnel time in e-mail management
- **Spam as a Security Threat**—Spam is not just a nuisance. E-mails can contain malicious code or Distributed Denial of Service (DDoS) attacks; while virus-infected e-mails can use *spam-like* methods for distribution, like the outbreak caused by the Sobig.F virus

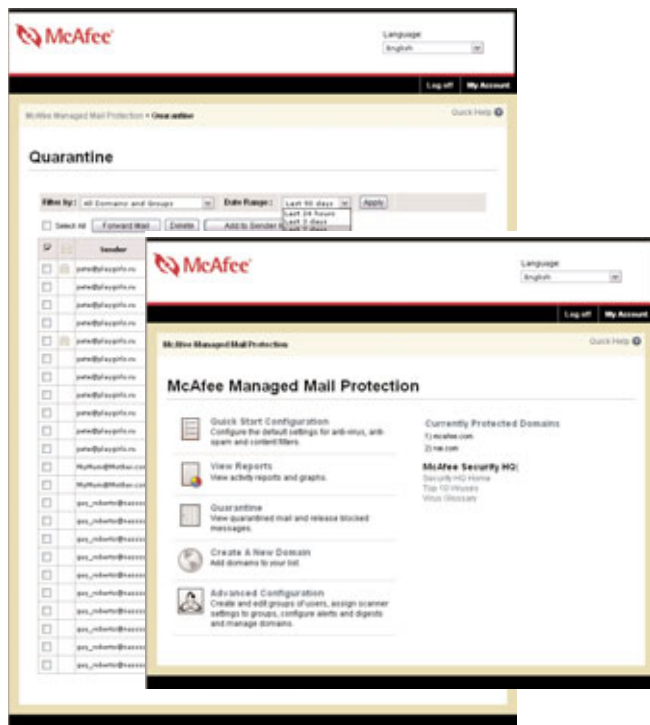

Managed Mail Protection helps companies to protect against time-wasting messages or inappropriate content without increasing the workload on the overextended IT staff or on an existing network. With built-in McAfee SpamKiller® technology, Managed Mail Protection immediately catches 98 percent of spam e-mails. It is further configurable, through the use of blacklists and whitelists and a modifiable rule set, to catch even more spam e-mails, as defined by your company's anti-spam policy.

Proactive Virus Protection before Threats Reach Your Network

It's reported that more than 75 percent of viruses are received via e-mail. Viruses like Melissa, Goner, and Nimda have all used e-mail applications to proliferate and cause chaos. Ensure that your environment is free of viruses by having Managed Mail Protection scan your e-mails for malicious threats prior to reaching your mailboxes. Backed by the award-winning McAfee virus scanning engine, Managed Mail Protection filters for viruses, in addition to spam and inappropriate content, before e-mails enter your network—ensuring your network is protected from the latest threats.

Visibility, Reporting, and Customization at Your Fingertips

No need to go to the office just to check your security situation. Managed Mail Protection administrators can view their quarantined messages and e-mail performance statistics with a secure Web interface, accessible from anywhere, at anytime. Our Web interface also provides administrators with the ability to customize spam and content filters for their business environment. End users are given the additional feature of creating their own spam filters for their mailboxes.

McAfee Managed Mail Protection's secure Web interface enables administrators to manage and monitor their security needs from anywhere and at anytime.

System Requirements

Managed Mail Protection is a managed security service that does not install nor reside on the desktop, making system requirements unnecessary. However, a company using Managed Mail Protection will need to have its own mail domain, such as yourdomain.com, with a static IP address and a dedicated mail server, either in-house or hosted by an ISP. By simply having the mail exchange (MX) record redirected through the McAfee servers, mail traffic will be scanned quickly and easily—before entering or leaving your network—with less than a one-second delay in transit.

McAfee PrimeSupport

McAfee has pursued a strategy of providing best-of-breed technology for each type of security and performance management application—but the Protection-in-Depth™ Strategy is more than just deploying and implementing best-of-breed solutions today. Prevention is certainly our first priority, but inevitably, you will have to react to a problem.

The McAfee PrimeSupport® program is essential for making the most of your investment in McAfee System and Network Protection Solutions. McAfee's PrimeSupport team has all the right resources and is ready to deliver your needed service solution. PrimeSupport resources include: delivering authorization to access all available maintenance releases and product upgrades, access to a comprehensive suite of additional online self-support capabilities, live telephone support accessible 24/7/365, available assigned support account managers, and a range of software and hardware support solutions that can be tailored to meet your needs.

McAfee, Inc. 3965 Freedom Circle, Santa Clara, CA 95054, 888.847.8766, www.mcafee.com

McAfee® products denote years of experience and commitment to customer satisfaction. The McAfee PrimeSupport® team of responsive, highly skilled support technicians provides tailored solutions, delivering detailed technical assistance in managing the success of mission-critical projects—all with service levels to meet the needs of every customer organization. McAfee Research, a world leader in information systems and security research, continues to spearhead innovation in the development and refinement of all our technologies.
