

Managed VirusScan

Always on, Automatic Virus Protection

Offload the Burden of Managing Anti-Virus

McAfee® Managed VirusScan®, the new brand for VirusScan ASaP, means automatic virus protection for companies that lack the expertise and personnel to implement and manage an anti-virus solution for their desktops and servers.

Proactive Protection with Outbreak Response

Virus protection is only as secure as its last applied update. But unlike traditional software that prompts end users to manually apply new virus updates to their systems on a continuous basis, Managed VirusScan automates the process by checking for updates and applying them transparently at frequent intervals throughout the day.

Created with the small business in mind, Managed VirusScan offloads the burden of managing anti-virus and anti-spyware software by providing automatic updates to keep users protected around-the-clock. Managed VirusScan installs online to provide protection immediately, not in days or weeks. And the maintenance for Managed VirusScan is automated—it requires no user interaction for virus updates—your desktops and file servers will receive the latest protection automatically. Save time, resources, and additional deployment and management costs with Managed VirusScan’s always on, automatic virus protection.

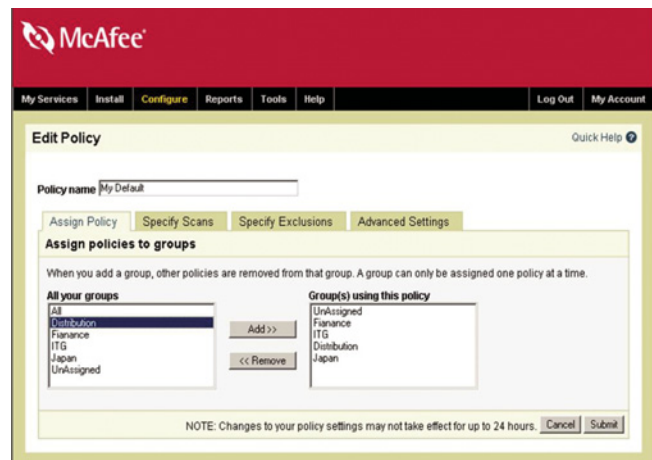

Managed VirusScan keeps your desktops protected—even during outbreak situations. With an enhanced Outbreak Response feature, virus updates are automatically distributed to your systems within one hour of a medium or high DAT posting for immediate protection. Depend on Managed VirusScan, not your end users, to secure your critical business data.

Unique, Small Business Solution

Available in eleven languages, Managed VirusScan provides many cost-saving features to benefit a small business environment. With an installation file of less than 3MB, Managed VirusScan aims not only to protect a small business from viruses, spyware programs, and malicious threats, but also does not cause any disruptions with pop-up reminders nor maximizes system resources to a business’ day-to-day operations. Additionally, with the McAfee Rumor Technology, Managed VirusScan saves network bandwidth and update time with virus updates that are compressed and minimized in order to maximize speed of protection.

Customize Anti-Virus Rules and Policies

Managed VirusScan offers the added flexibility, free of charge, to schedule on-demand scans, set exclusions, and offer group management for your systems. With Web-based policy configuration, you can choose when additional scans are performed or how frequent Managed VirusScan checks for anti-virus updates. This customization allows for flexible use of your network resources and bandwidth. Managed VirusScan policy configuration keeps you protected against new threats and offering you flexible security.

Customize and configure company-wide anti-virus policies from McAfee’s secured Web-based reporting portal.

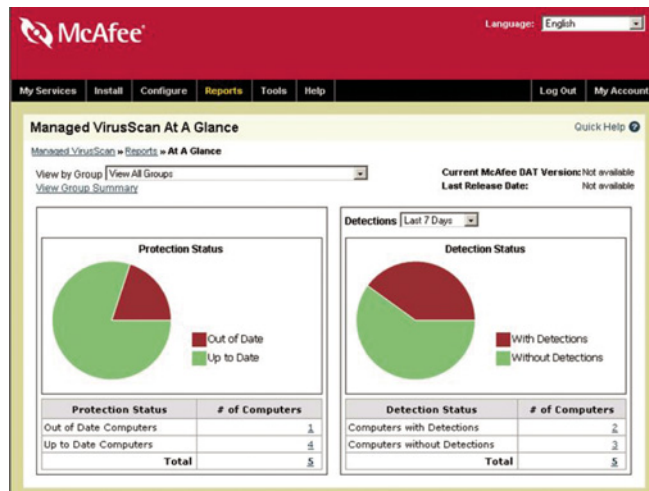

Stop Spyware Programs from Your Systems

Spyware is becoming an increasing threat to companies of all sizes. Managed VirusScan can scan and stop the top 200 pesky spyware programs from hiding in your systems—providing greater desktop security, performance, and blocking the re-install of unwanted programs. Enhance the privacy of your business’ computing experience by keeping your systems free of spyware that may be watching, recording, and externally transmitting sensitive company information.

View Realtime Forensics

Keeping current with virus updates is only as effective as ensuring company-wide protection. But how can you ensure that all users have the latest protection? With Managed VirusScan’s Web-based reports, centralized management, and enforcement provide realtime forensics into your systems—all at no additional cost.

Managed VirusScan stops piracy and lets you know what systems are in your environment, keeping your business one step ahead of virus outbreaks. Detailed reports, available 24/7, provide administrators information, coverage status summary, desktops updated, and viruses cleaned, deleted, and quarantined.

Customize and configure company-wide anti-virus policies from McAfee's secured Web-based reporting portal.

Protection-in-Depth

Managed VirusScan is part of the McAfee Protection-in-Depth™ Strategy that provides security from the edge of the network to PCs and servers. Protection-in-Depth is a smarter, proven, and more proactive way to detect, prevent, and minimize security risks. It provides unified, cost-effective, multi-layered protection, enabling companies to defend data throughout the organization.

McAfee PrimeSupport

The McAfee PrimeSupport® program is essential for making the most of your investment in McAfee System and Network Protection Solutions. McAfee's PrimeSupport team has all the right resources and is ready to deliver your needed service solution. PrimeSupport resources include: delivering authorization to access all available maintenance releases and product upgrades, access to a comprehensive suite of additional online self-support capabilities, live telephone support accessible 24/7/365, available assigned support account managers, and a range of software and hardware support solutions that can be tailored to meet your needs.

System Requirements

Managed VirusScan is designed for PC platforms with Microsoft® Windows® operating systems. Users must meet the following system requirements to take advantage of the service:

- An Intel Pentium processor or compatible architecture
- RAM requirements: 64MB minimum; 128MB recommended; 256MB recommended for servers
- Microsoft mouse or compatible pointing device
- 256-color VGA monitor or higher
- Internet Connection: Microsoft Internet Explorer 5.5 with SP2 or later
- Supports Workstations: Windows 95/98/ME/NT (4.0 with SP6a or later), 2000 Professional with SP2 or later, XP Home or Professional
- Supports Servers: Windows NT (4.0 with SP 6a or higher), NT 4.0 Server Enterprise Edition, 2000 with SP2 or later, 2000 Advanced Server with SP2 or later, 2003 Standard Server, 2003 Enterprise Server, 2003 Web Edition
- Exceptions: Spyware detection, script scanning, and e-mail scanning are not supported on Windows 95/ME. Buffer overflow protection and archive scanning are not supported on Windows 95/98/ME
