

McAfee Preventsys Risk Analyzer

Proactively identify and respond to enterprise-wide security risks

You do your best to keep up. Assessing multi-vendor, multi-product security risk data can be exhausting and confusing. The time and effort spent collecting data leaves you little time to understand how this valuable data affects your business. To quickly address critical risks to your business assets, you need effective management that prioritizes security information and processes throughout your enterprise. You need to take charge of your security risk management.

McAfee® Preventsys™ Risk Analyzer provides a single view of IT security risks across your network, ensures high availability of critical assets, and clearly communicates security compliance to executive management. Ideal for government agencies and enterprises, McAfee Preventsys Risk Analyzer coordinates and regulates environments, security risk assessments, and compliance.

Key Benefits

- Security risk dashboard presents a single, elegant view of network risks
- PolicyLab™ automatically helps to confirm and enforce internal and external security policies
- The RiskScore™ engine pinpoints risk-exposed assets and eliminates duplicate results by correlating data from third-party products
- Compliance reports deliver concise, accurate enterprise-wide analyses
- Centralized system manages auditing of activities across all aspects of policy: people, processes, and technical controls
- Open architecture integrates with other security management tools to help you maximize and protect your existing investments

End Multi-Vendor Headaches

Information is only useful if it can be effectively consolidated and interpreted. Don't let data from disparate sources weigh you down. McAfee Preventsys Risk Analyzer enables you to synthesize multi-vendor vulnerability, configuration, and threat data to greatly reduce the time it takes to get a clear, prioritized picture of top security risks, compliance issues, and potential solutions. Command and orchestrate security reporting and compliance, while leveraging your existing investment in security management tools. Correlate and manage data from multiple third-party point solutions. Eliminate duplicate results and reduce the amount of data you struggle to manage. Now you can easily calculate security risks and consistently monitor changes to your organization's risk score.

Confidently Mitigate Risk

Living in fear of the unknown? Stop dreading the possibilities and take charge of your future. Track current threats and easily summarize your current security risk posture. Develop daily, easily interpreted security reports for executives to help chart and maintain your organization's risk management course.

Cover Your Assets

Your company's data is priceless, so leave nothing to chance. Fortify your corporate data with McAfee Preventsys Risk Analyzer. Protect confidential customer and company information by addressing the top risks that affect your most critical assets. Consolidate, transform, and correlate thousands of security facts from across your IT infrastructure to generate a prioritized task list of remediation items. With McAfee Preventsys Risk Analyzer, locating and addressing exposed assets requires less time and money than it does through manual efforts.

Plus, there is an integration benefit: if you currently use McAfee ePolicy Orchestrator® (ePO™), you can import network and asset data into McAfee Preventsys Risk Analyzer for advanced auditing and reporting across the network.

Be Prepared

Practice makes perfect. Establish and implement effective, repeatable methodologies for your security risk-management processes. Manage and interpret the impact of risks to critical business assets. Automated compliance reporting lets you save time and money by demonstrating security compliance to auditors and management. Save money, too, by eliminating the need for expensive pre-audits.

Comply on the Fly

Regulatory compliance has emerged as a compulsory business necessity for large organizations. Compliance need not be confusing and time-consuming. Demonstrate compliance to corporate security policies, not just industry-accepted frameworks and established security standards, policies, and regulations. Automate the manually intensive process of demonstrating security compliance and provide your executives with the confidence required to sign off the effectiveness of their security controls. Confirming security policy adherence is easy with McAfee Preventsys Risk Analyzer. Flex your compliance muscle even more with custom policy development environments.

The Final Analysis

Apply what you've learned. Develop meaningful, executive-level, and detailed compliance analysis reports across your entire IT infrastructure. An effective planning tool, compliance reports include drilldown and comparison reports by asset, policy, controls, and business units. You'll stay ahead of the game and well-informed.

Power Through Integration

Energize your security risk-management portfolio with more key security and management elements from McAfee.

Visit http://www.mcafee.com/us/enterprise/products/risk_compliance_analysis/risk_analyzer.html for an up-to-date list of McAfee solutions that integrate with McAfee Preventsys Risk Analyzer.
