

# McAfee SMB Editions

## Featuring McAfee ProtectionPilot

### Threat Protection Designed for Small- to Medium-Sized Businesses—Just Add the Network!

For most small- to medium-sized businesses (SMBs), security is a huge challenge. With systems connected to the Internet, any company could fall victim to malicious threats like viruses, worms, hacker attacks, spam, and inappropriate content.

SMBs face this reality every day, often with limited IT staff juggling various projects and with limited expertise to maintain and implement them. For SMBs that want to stay in control of their defenses—monitoring protection, ensuring system compliance, and troubleshooting problems—this is an especially difficult reality. Administrators want to keep the destiny of their security in their own hands without the complexity. Threat protection without a means to centrally manage it is like a human body without a brain.

Just like large corporations, smaller businesses are highly dependent on their IT infrastructures and the Internet for day-to-day operations. As with large corporations, the small company has to strike a balance between business and security requirements. However, unlike large corporations, small businesses often lack dedicated security knowledge and are looking for simple ways to manage their threat protection. The importance of a simple and rapid method of deployment, policy management, and visibility is paramount.

### Just Add the Network

McAfee® understands the unique challenges of small- to medium-sized businesses and has designed the McAfee SMB Edition solutions to simplify the complexity involved with protecting SMB computing environments. By integrating best-of-breed solutions with an easy-to-use, centralized management tool, McAfee SMB Editions are a simple, proactive approach to the deployment and ongoing management of threat protection for your small- or medium-sized business.

Whether your security needs are isolated to the desktops and file servers, or you need additional coverage that adds e-mail protection, McAfee has the right, easy-to-manage suite to meet your SMB protection requirements.

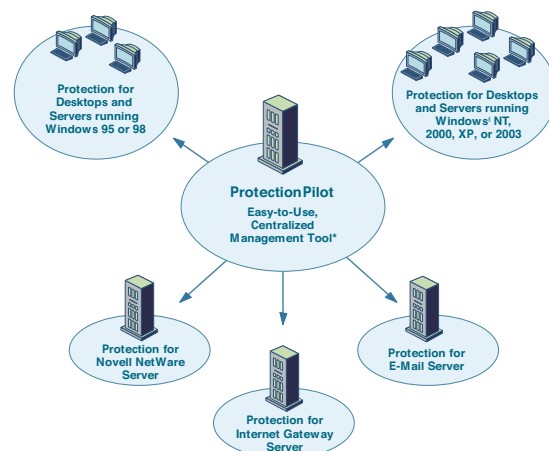

**Active VirusScan SMB Edition**      **Active Virus Defense SMB Edition**

### Solutions Designed for SMBs

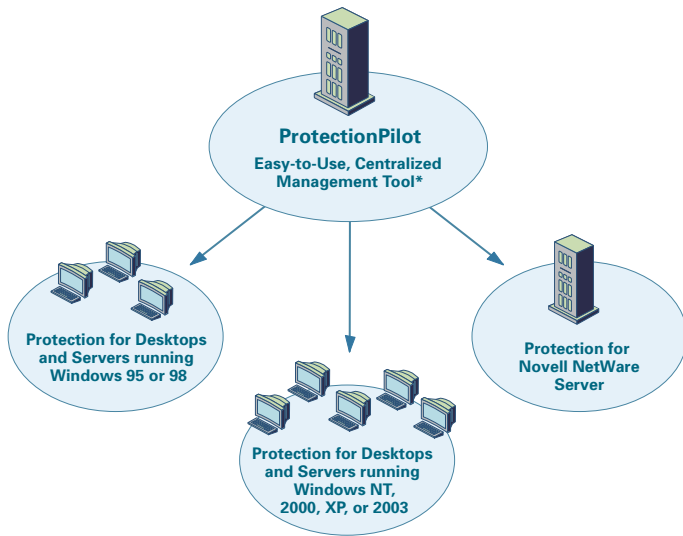

Designed specifically with ease-of-use in mind for small- to medium-sized businesses, McAfee SMB Editions provide two solution suites for comprehensive threat protection. Focal to these suites is McAfee ProtectionPilot™, a centralized tool to guide you through the mystery of deploying, monitoring, and managing threat protection, keeping it in place and up-to-date. The award-winning McAfee VirusScan®, GroupShield®, and WebShield® SMTP technologies then take over to stop malicious threats—viruses, worms, and trojans—in their tracks. In addition, VirusScan delivers proactive protection from the newest security threats, including potentially unwanted programs (e.g., spyware), buffer overflow exploits, and blended attacks. Administrators can then easily monitor all systems for threat activity and update status within the interactive security dashboard—protection is automatically checked and updated, and any fine-tuning or configuration changes are a breeze via the easy-to-navigate task menu.

### Active Virus Defense SMB Edition

\* A dedicated system or server is not required.

**Active VirusScan SMB Edition**

**Centralized Management with McAfee ProtectionPilot**

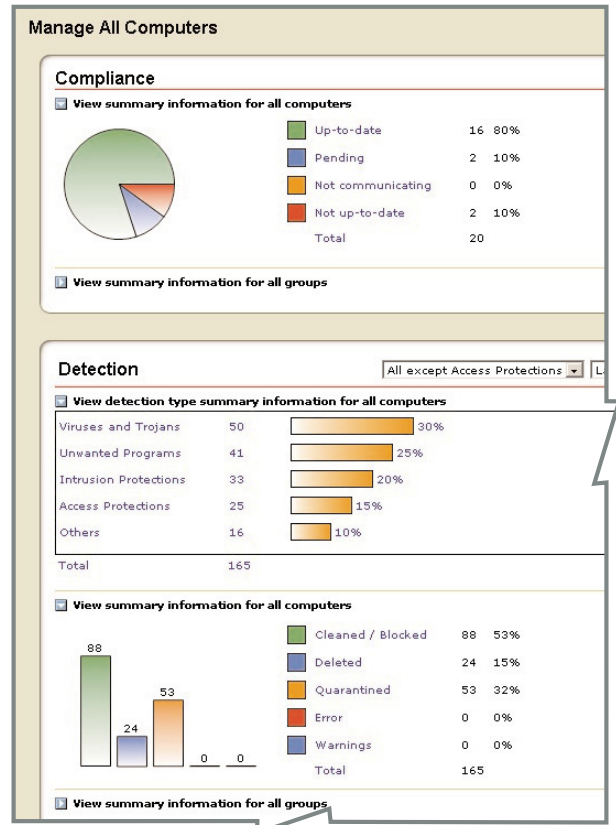

Designed for small- to medium-sized businesses, McAfee ProtectionPilot is a centralized tool that provides a simple, proactive approach to the deployment and ongoing management of threat protection. Central to the McAfee range of SMB Edition solutions, McAfee ProtectionPilot guides you through the mystery of deploying, monitoring, and managing threat protection, keeping it in place and up-to-date.

**Maximum Protection, Effortless Maintenance**

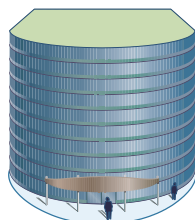

McAfee ProtectionPilot keeps a constant vigil, automatically checking with McAfee for any new anti-virus/security updates on an hourly basis. These updates are then immediately deployed to all systems—no interaction is required by the administrator.

**Realtime Monitoring**

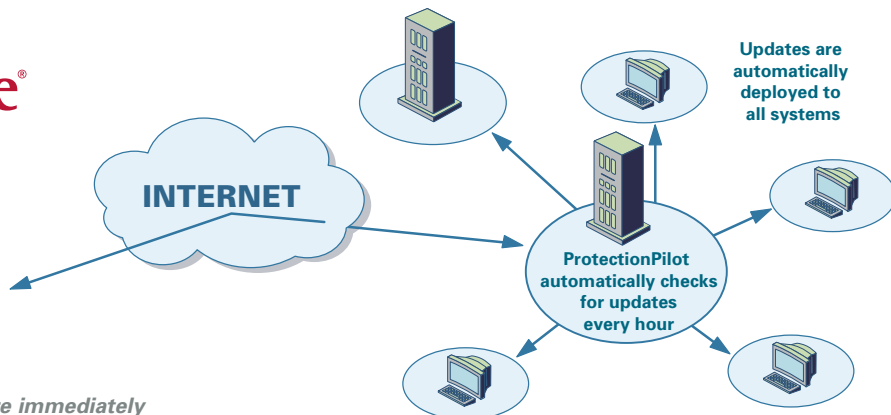

Locating out-of-date systems and checking for virus infections or potentially unwanted programs are effortless with the ProtectionPilot Interactive Security Dashboard. At the click of a button, compliance- and threat-detection activity are easily viewed for all systems, groups, or individuals. More detailed information is obtained easily with the click-through capability of the interactive dashboard. Critical information is easily viewed on the screen or printable for later reference.

One-click monitoring shows compliance- and threat-detection activity in an easy-to-use format.

New updates from McAfee are immediately deployed to all systems.

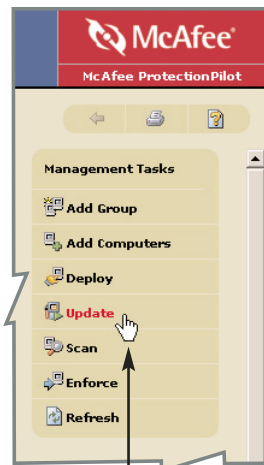

**Automatic Enforcement**

ProtectionPilot is always at work, automatically enforcing security protection settings and policies on each system. In addition to regular checks for any policy or setting changes with the central server, the ProtectionPilot agent also enforces compliance on each local system—the agent automatically checks the local system to ensure the protection is correctly configured and installed. Automatic policy enforcement helps ensure the protection is effective and removes possible weak links like end users who can change settings or disable critical protection software.

**Do It Now! Management Task Menu**

Ongoing administration is made simple, quick, and effective with the Do it Now! approach of the management task menu. Tasks like deploying protection, scanning for viruses, emergency updating, enforcing settings and policies, and checking the status of a system can all be performed immediately with the click of button via the Management Task menu.

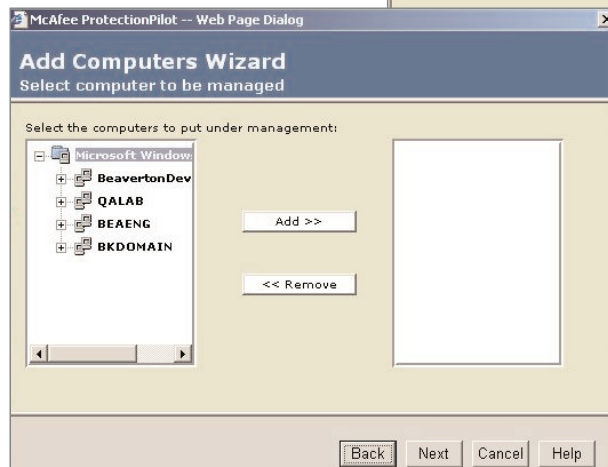

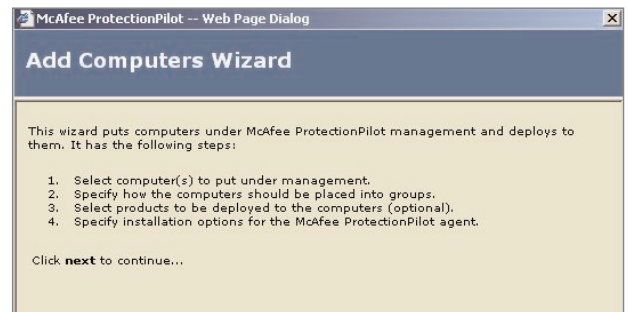

**Emergency Update Now!**

**No Security Knowledge Required**

ProtectionPilot installation and management tasks are all intelligently wizard-driven, taking the mystery out of deployment and ongoing management of threat protection. Following installation, protection will be deployed and settings and policies will be implemented—domains are automatically recognized at initial installation—making locating and deploying to systems across the network simple and straightforward.

**Award-Winning Threat Protection from the Desktop to the Gateway**

McAfee SMB Editions leverage the award-winning McAfee VirusScan engine offering specialized protection for business environments. Consistently recognized by independent testing organizations as the world’s leading threat detection and cleaning technology, the engine stops viruses and malicious threats, and provides proactive protection against the newest threats. McAfee has an enviable track record in third-party tests for delivering effective detection and cleaning, depending on your needs across desktops, file servers, and e-mail servers.

*Intelligent wizards make ongoing threat protection management, deployment, and implementation a snap.*

## McAfee Active VirusScan SMB Edition

McAfee Active VirusScan SMB Edition is the entry-point suite offering threat protection for desktops and file servers. At the heart of this suite is McAfee ProtectionPilot, a centralized tool to guide you through the mystery of deploying and monitoring threat protection, and keeping it in place and up-to-date.

### Centralized Management Tool ProtectionPilot

McAfee ProtectionPilot is a centralized management tool that provides a simple, proactive approach to deployment, management, and maintenance of threat protection.

### Microsoft Desktop and File Server Protection McAfee VirusScan Enterprise

VirusScan provides comprehensive threat protection for the hardest part of the system to manage—desktops and file servers. VirusScan proactively defends against threats (viruses, worms, and Trojan horses), buffer overflow exploits, potentially unwanted programs, and blended attacks. Powerful, flexible, and bandwidth-friendly, VirusScan delivers protection the way it's needed in today's fast-moving, highly adaptive businesses.

### McAfee NetShield for NetWare File Servers

McAfee NetShield® protects NetWare file servers through realtime scanning to detect and clean viruses and other threats. By caching file status when an initial scan is performed, NetShield ensures that clean files are not rescanned unless and until modified, significantly improving performance and efficiency.

## McAfee Active Virus Defense SMB Edition

In addition to offering desktop and server protection, McAfee Active Virus Defense SMB Edition includes additional threat protection and content filtering for mail servers and threat protection at the SMTP mail Gateway.

## McAfee WebShield for Internet Gateways

McAfee WebShield keeps viruses and other Web-based threats out of the network, stopping them before they enter at the Internet gateway—keeping both inbound and outbound SMTP traffic clean and virus-free.

## McAfee GroupShield for Mail Servers

The Internet is not the only entry point for a threat—collaborative environments such as e-mail servers are also at risk. McAfee GroupShield specifically protects this layer of the network, with threat protection for Lotus Domino and Microsoft Exchange servers.

McAfee makes managing your system protection easier, less time-consuming, and more cost-effective for your business. McAfee SMB Edition suites combine the perfect solutions to take the guesswork and worry out of keeping protection updated, properly configured, and managed. Maximum protection—Minimum fuss.

## McAfee PrimeSupport

McAfee has pursued a strategy of providing best-of-breed technology for each type of security and performance management application—but the Protection-in-Depth™ Strategy is more than just deploying and implementing best-of-breed solutions today. Prevention is certainly our first priority, but inevitably, you will have to react to a problem.

The McAfee PrimeSupport® program is essential for making the most of your investment in McAfee System and Network Protection Solutions. McAfee's PrimeSupport team has all the right resources and is ready to deliver your needed service solution. PrimeSupport resources include: delivering authorization to access all available maintenance releases and product upgrades, access to a comprehensive suite of additional online self-support capabilities, live telephone support accessible 24/7/365, available assigned support account managers, and a range of software and hardware support solutions that can be tailored to meet your needs.

**McAfee, Inc.** 3965 Freedom Circle, Santa Clara, CA 95054, 888.847.8766, [www.mcafee.com](http://www.mcafee.com)

McAfee® products denote years of experience and commitment to customer satisfaction. The McAfee PrimeSupport® team of responsive, highly skilled support technicians provides tailored solutions, delivering detailed technical assistance in managing the success of mission-critical projects—all with service levels to meet the needs of every customer organization. McAfee Research, a world leader in information systems and security research, continues to spearhead innovation in the development and refinement of all our technologies.
