

# McAfee SecurityShield for Microsoft ISA Server

Secure your ISA servers

As the first point of entry into your network, your firewall absolutely must be secure. Any unwanted elements—such as viruses, spam, and inappropriate content—need to be denied entry to your organization. Filter and keep track of the information passing through your Microsoft® ISA Servers with McAfee® SecurityShield.™

With anti-virus, anti-spam, anti-phishing, and content filtering, SecurityShield protects your Microsoft ISA 2000 and 2004 Servers by filtering all network traffic. It automatically repairs, blocks, or quarantines infected traffic entering or leaving through key web and Internet email traffic protocols—SMTP, HTTP, and FTP.

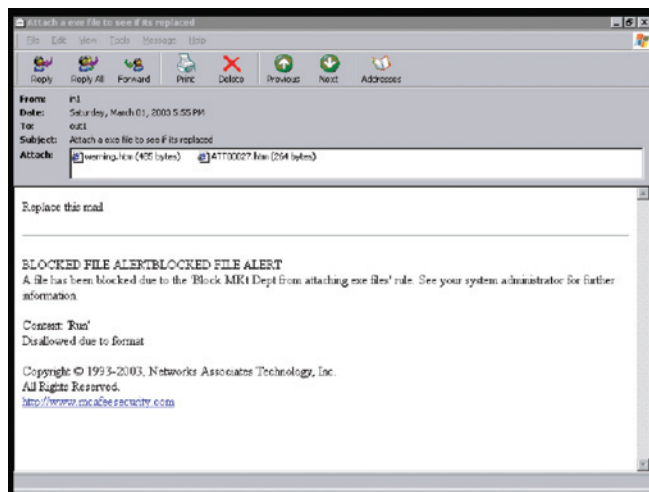

## Securing Content

Now you can protect against inappropriate content coming into your network, as well as guard against sensitive information leaving your network. The SecurityShield email content filter blocks or quarantines messages containing specific words and phrases that violate content rules.

The optional McAfee SpamKiller® for SecurityShield detects and blocks spam, phishing, directory harvest attacks, and other forms of email abuse. Streaming updates ensure your protection is current. Plus, users get reports of what was blocked and can administer their own spam quarantines and manage their blacklists and whitelists.

## Stop Attacks in Their Tracks

McAfee Outbreak Manager proactively looks for suspicious email behavior patterns that may indicate new viruses, and implements a 24/7 automatic response to the outbreak as defined by your administrator. Outbreak Manager performs essential outbreak prevention tasks such as emergency DAT file updates, increasing scan settings, forcing heuristic analysis, blocking specific file types, and more.

Blocked email alert

## Manage Your Security

SecurityShield works with McAfee ePolicy Orchestrator® (ePO™). ePO keeps protection up to date and monitors security status from a single console. With ePO, remote deployments and security management are easily managed from a central location.

## Security Policies That Fit

Different groups in your organization may have different needs. For example, payroll may have different needs than manufacturing. SecurityShield lets you configure different security policies to meet the needs of these different groups. And to make it easy, you can access your Microsoft Active Directory.

## Automatic Updates

Virus security products are only as good as their most recent updates. With SecurityShield, automatic updates ensure that your Microsoft ISA Servers are always up to date with the latest McAfee DAT files and engines.

## Learn More

Visit [www.mcafee.com](http://www.mcafee.com), or call us at 888.847.8766, 24 hours a day, seven days a week.

McAfee SecurityShield is part of the McAfee family of business security products and services. McAfee provides a comprehensive portfolio of integrated risk management and mitigation solutions that secure your business advantage.

## Professional Services

Along with our partners, McAfee offers a wide variety of services to help you assess, plan, deploy, tune, and manage your security.

## Technical Support

Make sure that everything runs smoothly during and after installation with flexible programs from McAfee Technical Support. Our highly skilled and certified security specialists have a wealth of knowledge and resources to meet your security needs.

## System Requirements

**Note:** The following are general system requirements and may vary depending on the nature of your environment.

- Platform: Microsoft ISA Server 2000, 2004, and 2006
- Operating system: Microsoft Windows® 2000 or 2003
- Disk space: 600 MB of hard-disk space or higher
- Memory: 512 MB RAM and 768 MB of paging space
- Processor: 566 MHz Pentium II or higher
