

McAfee VirusScan PDA

Complete Protection for Pocket PC Devices

Everyone knows a company needs multi-tiered defense in order to fend off Internet virus threats. You probably have anti-virus protection in place at the desktop and groupware levels—maybe at the file server and Internet gateway as well. But what are you doing about the increasing number of Personal Digital Assistants (PDAs) connecting to your network every day?

McAfee® VirusScan® PDA is comprehensive virus security designed specifically for your PDA. Each time a PDA connects to a network, it's like a floppy disk being inserted into a computer—you don't know where it's been or what infections it might carry. As millions of users turn to these powerful, pocket-sized devices, the threat of infection through and to PDAs increases. VirusScan PDA is simply the best way to guard against this increasing threat.

The Next Major Virus Carrier

PDAs can be infected by viruses written specifically for them. Current threats are able to delete files and data from your PDA. Future threats might be even more harmful. Wireless access to the Internet or other PDAs makes this risk even greater. When you download e-mail wirelessly or transfer files via infrared link, your PDA can become a carrier for viruses. As a result, it's important to have virus protection in two places: on the PDA itself and on the synchronization link with your PC. If there is even the smallest hole in your defense, a virus will find it. Don't let PDAs be the weak link in your defense system.

Most Complete Protection

McAfee VirusScan PDA is advanced, feature-rich virus protection available for Microsoft® Pocket PC based devices. As PDAs add functionality and connectivity, they become more of a target to virus writers and hackers, but with VirusScan PDA you are protected!

On-Device Protection

New advanced technology allows proven McAfee anti-virus technology to be ported to protect Microsoft Pocket PC PDA devices. Only VirusScan PDA can offer the proven technology of McAfee's award-winning engine optimized to protect your Pocket PC device.

Automatically Updated

In the end, it all boils down to effective virus detection and removal. A virus security solution is only as good as its most recent update. VirusScan PDA includes automatic updating technology that will make sure your PDA is always protected from the latest threats. Whether it is new viruses or new product updates, VirusScan PDA takes the hassle out of updating.

Scheduled and Action Scanning

Your network is in the most danger when users synchronize their PDAs with their PCs. VirusScan PDA has been designed to initiate scans for threats anytime you insert a storage card, activate a synchronization with your PC, or power your PDA—basically whenever your PDA could be attacked. For added protection, VirusScan PDA also allows you to schedule updates and scans whenever you want.

Comprehensive Coverage

McAfee is known for its superior security products, and new McAfee VirusScan PDA adds yet another level of protection for users. The McAfee family of security products guarantees that you will be protected no matter where the threat comes from. Whether it's a PC, Internet gateway, groupware program, or a PDA, we've got industry-leading protection for you!

The McAfee Difference

McAfee, a McAfee, Inc. business, is the company that over 70 million customers turn to for virus defense. McAfee provides manageable anti-virus solutions to protect e-businesses from virus attacks. McAfee Active Virus Defense is an award-winning, multi-tier virus defense that includes VirusScan desktop protection; NetShield® for file servers; GroupShield® groupware protection; and WebShield® for Internet gateway protection. McAfee provides effective tools to manage anti-virus protection, enforce virus security policy, obtain DAT updates, and generate reports with Thin Client and ePolicy Orchestrator®. McAfee is a leader in the anti-virus software market, having more than twice the corporate anti-virus market share than its nearest competitor, according to a 2000 IDC report.

World-Leading Research

Advanced detection and quick response to outbreak situations can only be achieved by a world-leading virus research organization. VirusScan PDA is backed by AVERT.™ A division of McAfee Labs, AVERT employs more than ninety researchers located around the globe on six continents. This true Follow-the-Sun approach ensures that no matter where or when a virus may surface, McAfee virus experts will be on the scene fully armed. McAfee AVERT assures that VirusScan PDA protects you from all known Microsoft Pocket PC viruses. For more information, McAfee AVERT can be reached at <http://www.mcafeeb2b.com/avert>.

Features and Benefits

- Complete Microsoft Windows® Mobile and Pocket PC Protection
- Complements other anti-virus defenses
- Protects PDAs from new threats
- Updates itself automatically
- Allows scheduled scans for added protection
- Scans whenever synchronization or memory is activated
- Manageable with ePolicy Orchestrator's detailed reports
- Sets and enforces security policies on Pocket PC devices via ePolicy Orchestrator
- Allows updating interval through ePolicy Orchestrator
- Backed by AVERT, the world's leading security research team

System Requirements

- PC Platforms: Windows ME, Windows 2000, and Windows XP
- PDA Platforms: Windows Pocket PC 2002 and Windows Mobile 2003
- On Device: 375K

McAfee, Inc. 3965 Freedom Circle, Santa Clara, CA 95054, 888.847.8766, www.mcafee.com

McAfee® products denote years of experience and commitment to customer satisfaction. The McAfee PrimeSupport® team of responsive, highly skilled support technicians provides tailored solutions, delivering detailed technical assistance in managing the success of mission-critical projects—all with service levels to meet the needs of every customer organization. McAfee Research, a world leader in information systems and security research, continues to spearhead innovation in the development and refinement of all our technologies.
