

ScanAlert™ Company Overview

SCANALERT COMPANY OVERVIEW

Since the company's founding in 2001, ScanAlert's HACKER SAFE® certification service has become the world's most viewed and most trusted web site security certification, protecting over 15 million ecommerce transactions each month. The company's patent pending security scanning technology is used by over 80,000 web sites, including over 60% of the Internet Retailer Top 500 list, to protect them from hackers and certify their security to their customers and business partners. The HACKER SAFE certification mark appears on over 200 million web pages and is viewed over 6 billion times each month in over 150 countries. HACKER SAFE certification has been shown to be an important part of the where-to-buy decision for many online shoppers.

HACKER SAFE is the only trustmark to be included directly in the search results of major Internet comparison shopping sites. This unique program allows certified merchants to have their security seal appear in product listings on over 300 shopping sites, including Yahoo! Shopping, PriceGrabber.com and Pronto.com. More than 30 million unique shoppers a month visit these web sites to find information about price, product availability and merchant reliability.

ScanAlert is a leading provider of PCI (Payment Card Industry Data Security Standard) compliance services. The company operates exclusive co-branded PCI compliance validation programs for over 200 partners, including Visa International, the Council of Better Business Bureaus and PayPal. These programs, available in seven languages, are aimed at enabling over 250,000 the merchants and payment service providers in over 70 countries to access easy-to-use online PCI compliance services.

ScanAlert also operates HACKER SAFE Labs, the security industry's only research group focused on ecommerce application security. HACKER SAFE Labs focuses on discovering previously unknown security risks in ecommerce platforms and applications. Combining in-the-lab testing with data derived from the real-world security issues of tens of thousands of HACKER SAFE certified web sites, HACKER SAFE Labs is uniquely positioned to contribute research and exploit prevention knowledge to the network security community.
