In our continuing effort to providing the latest vulnerability remediation data, McAfee has released this V-Flash update for McAfee Hercules products. The following is a summary of the vulnerabilities and their updated/added environments.

## New/Updated Remedies

Name	Status	Environment
119859 - RHSA-2012:0093 Critical: php security update	New	Red Hat Enterprise Linux AS (v. 4)
	New	Red Hat Enterprise Linux ES (v. 4)
	New	Red Hat Enterprise Linux WS (v. 4)

## How to Apply V-Flashes

Hercules customers can use the Hercules Administrator to manage review/manage their V-Flash updates. V-Flash update can be performed on demand or on a scheduled basis. To perform a V-Flash on demand, go to the Operations Center and click on the V-Flash tab. Then click on V-Flash Now. The progress will be indicated on the screen (refresh may be required). Settings can be modified by clicking the V-Flash Settings button and modifying for the desired day interval and time and clicking OK. For full details on V-Flash, consult the "Manage V-Flash Server Operations" section of the Hercules User's Guide.
