

McAfee Web Anti-Malware Module, Gateway Edition

Test results

McAfee Web Gateway Leads Independent Tests

As the number one-rated malware protection, McAfee® Web Gateway uses next-generation proactive intent analysis to filter out malicious content from web traffic in real time. The proactive threat protection against unknown malware such as zero-day and targeted attacks is fueled 24/7 by McAfee Global Threat Intelligence and accompanied by comprehensive, “traditional” anti-virus protection to block known malware. Combining next-generation proactive analysis, outbound malware detection, and anti-virus capabilities, McAfee Web Gateway provides the industry’s most unique gateway-specific anti-malware technology—today’s best defense against malware.

AV-Test, one of the worldwide leading providers of test scenarios analyzing effectiveness, behavior, and performance of IT security solutions, periodically tests numerous anti-malware products. McAfee Web Gateway consistently tops these tests with its powerful anti-malware protection.

“McAfee’s Web Gateway appliance is our Clear Choice winner ... McAfee’s appliance thwarted more malware—with lower latency—than the other gateways.”

—Network World

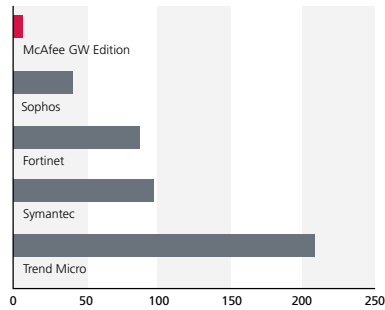

Industry reviewers and customers alike agree that McAfee Web Gateway offers superior technology.
