

# HP Endpoint Protection Services

Slash risk, hassle, and cost with security built on McAfee technology.

IT has better things to do than chase down noncompliant laptops, misbehaving servers, and endless software updates. That's why HP Enterprise Security Services (HP ESS) and McAfee—now a part of Intel® Security—have partnered to deliver a portfolio of security services for laptops, desktops, servers, and mobile devices. We offer the best of HP's security, enterprise, and outsourcing knowledge built on the rich endpoint security, unmatched threat research, and unified management of McAfee® software. Now you can consolidate tools and management to cut operational costs while embracing innovative ideas that enable your mobile enterprise.

Smartphones, tablets, desktops, laptops, and servers sit at the epicenter of complex attacks and data breaches that disrupt operations and siphon off IT resources. As threats rise, many IT teams are losing the battle to maintain the policies, software, incident response, and expertise required for reliable endpoint security.

## Experience Peace of Mind

With HP Endpoint Protection Services, HP ESS and McAfee consolidate tools and management systems to reduce the risk, hassle, and cost of your endpoint security and compliance program. Proven, comprehensive security integrates McAfee protection and management technology with HP security consulting expertise, transformative ideas, and service delivery excellence.

Your enterprise can reap the benefits of our dedicated research and development teams, economies of scale, customizable configurations, and management best practices. HP ESS security experts can help you strengthen your organization's security posture, lower total cost of ownership, and deliver a measurable reduction in business risk. With a foundation of mobile data security, you gain the confidence to enable your employees to work from anywhere at any time.

## Advance to Next-Generation Security

HP Endpoint Protection Services use McAfee endpoint protection products to provide continuous, updated, and powerful security against the entire spectrum of threats, from zero-day exploits to hacker attacks. As a core component of our Security Connected framework, we offer complete protection for all endpoints, including the latest mobile devices and virtualized environments, ensuring secure, seamless access to business applications and corporate data.

### HP Security Services Built on McAfee Technology

When you implement with industry best practices, innovative technologies, and global security vigilance, you get results. HP Endpoint Protection Services enable business agility with a secure mobile workforce and help you reduce costs through consolidation. Core endpoint services built on McAfee include:

- Antivirus.
- Antispyware.
- Host intrusion prevention.
- Personal firewall.
- Server hardening.

Using the same management foundation, McAfee and HP ESS can easily layer on additional services:

- McAfee ePO™ Deep Command with Intel® Active Management Technology (Intel® AMT) based remote management.
- McAfee Application Control.
- McAfee Network Access Control.
- McAfee Endpoint Encryption.
- McAfee Device Control.

### Improve Your Posture

HP ESS experts can implement protections at your site, then your team can take over, or you can allow HP to manage day-to-day security operations. If you choose the managed security offering, services are supported remotely from HP ESS' five Global Security Operations Centers on a 24x7 basis. We give you the best of both worlds: real-time updates with the attention, options, reports, and integration available only from an on-premises solution. As HP maintains your front line of defenses, the HP team leverages a dedicated hotline to McAfee Platinum Support, guaranteeing a response in minutes when it is needed most. You never have to fret about maintenance or pore over threat research. You can focus on other priorities, because your system's security is being proactively managed by our experts.

### Simplify Management

HP ESS makes full use of McAfee ePolicy Orchestrator® (McAfee ePO™) software, the unified McAfee management platform, to enhance efficiency, reduce costs, and maintain and prove compliance. Security systems leverage a single agent on the endpoint to manage security activities and policies from a centralized console, displaying events and status in a "single pane of glass." This exclusive McAfee architecture allows administrators to centrally deploy and adjust protections without disrupting users, burdening bandwidth, or slowing host systems.

In addition to saving time and resources at each endpoint, McAfee ePO software connects network and information security systems throughout your environment to expand operational efficiencies, improve policy management and incident response, and simplify reporting. Leveraging integrations and the HP services team, other software—from HP, McAfee, and third parties in the McAfee Software Innovation Alliance—can feed data into and be managed by McAfee ePO software. Thoughtful data integration and process consolidation like this helps you operate in control and compliant with regulatory guidelines.

### Streamline Operations

HP ESS leverages time-tested templates and mature, automated tools to secure endpoints quickly and prevent mistakes. Our centrally managed, consistently implemented services make it easier to achieve and maintain compliance, improving enforcement of security and privacy policies. When we implement a configuration, we know it will work because it is already working at a similar company. Consultants then tune policies, compliance reports, and dashboards to incorporate real-time data as well as details that auditors, administrators, and executives require.

### Adapt and Tailor Risk Management

The extensive McAfee portfolio allows HP ESS to meet your changing business and risk priorities. Strategic consulting services can guide risk assessment, help prioritize risk mitigations and other investments, and work with you to implement incremental controls. When it's time to add endpoint, information, or network security, the foundation of McAfee unified management makes activation fast and cost effective.

### Trust the Leaders

Together, HP ESS and McAfee can help your enterprise improve protections against evolving threats, wring cost savings out of existing infrastructure, and bring complexity under control. Our experts can help you protect your business—and boost your bottom line. [www.mcafee.com/hp](http://www.mcafee.com/hp)

### Five Years of McAfee and HP Leadership in Endpoint Security

- More than 500,000 nodes managed today.
- More than 3,000 HP security and privacy professionals worldwide.
- Five Global Security Operations Centers in major geographic regions.
- HP has more than 40 years of experience delivering managed security services.
- McAfee Labs has more than 500 threat researchers.
- More than 45,000 customers use McAfee ePO software on nearly 60 million nodes.
- McAfee consistently has the highest detection rating available from AV-Comparatives.

### McAfee Global Threat Intelligence

Woven into HP services, McAfee Global Threat Intelligence protects proactively based on:

- More than 100 million McAfee nodes deployed around the globe.
- More than 100 billion queries each month from all threat vectors—file, web, message, and network.
- The most comprehensive set of threat intelligence services in the market—file reputation, web reputation, web categorization, message reputation, and network connection reputation.
