

McAfee ePolicy Orchestrator Administration (5.9)

McAfee® Education Services Instructor-Led Training

The McAfee® ePolicy Orchestrator® Administration course from McAfee Education Services enables attendees to receive in-depth training on the benefits of the centralized management and deployment of McAfee products using McAfee ePolicy Orchestrator (McAfee ePO™) software. Enabling administrators to fully understand the capabilities of their security solution not only reduces the risks of misconfiguration, but also ensures that an organization gets the maximum protection from installation.

Audience

This course is intended for system and network administrators, security personnel, auditors, and/or consultants concerned with system endpoint security.

Agenda at a Glance

Day 1

- Welcome
- Security Connected and McAfee ePO Software Overview
- Planning a McAfee ePO Software Deployment
- Installing McAfee ePO Software
- Managing Permission Sets and Users
- Creating and Populating the System Tree
- Using the Tag Catalog

Day 2

- Sorting the System Tree
- McAfee Agent
- System Information
- Client Tasks
- Managing Policies

Day 3

- Deploying Software for Managed Systems
- Repositories
- Product and Server Maintenance with Repositories
- Managing Dashboards and Monitors
- Working with Queries and Reports
- Automatic Responses and Notifications

Day 4

- Database Maintenance and Server Utilities
 - Disaster Recovery
 - Agent Handlers
 - Rogue System Detection
-

COURSE DESCRIPTION

Learning Objectives

Welcome

Become familiar with McAfee information and support resources and feedback mechanisms.

Security Connected and McAfee ePO Software Overview

Describe the security connected model, McAfee ePO software features and functionality, and solution components and architecture.

Planning a McAfee ePO Software Deployment

Identify deployment considerations, describe deployment scenarios and solutions, identify McAfee ePO platform requirements, and discuss database sizing considerations.

Installing McAfee ePO Software

Identify installation requirements, recommendations, and best practices, distinguish between a new installation and a recovery installation, identify and distinguish between the different deployment options for a new installation, install McAfee ePO software, perform post-installation tasks, and identify configuration tools for the initial setup of the McAfee ePO software environment.

Managing Permission Sets and Users

Configure settings for personal settings, users, and permission sets, create a custom permission set, create users and assign permission sets, verify rights and access granted with permission sets, configure McAfee ePO software and Microsoft Active Directory user accounts, and configure user autocreation.

Creating and Populating the System Tree

Provide an overview of the McAfee ePO System Tree, use different methods for creating the System Tree, describe the various methods of organizing the System Tree, and create Permission Sets to let user accounts manage the System Tree.

Using the Tag Catalog

Learn the difference between tags without criteria (applied manually) and criteria-based tags (applied automatically and on-demand), how to use the New Tag Builder to create tags quickly, how to edit, delete and move tags between tag groups, and how to enable permissions for other administrative users.

Sorting the System Tree

Learn how to dynamically sort your machines into your McAfee ePO System Tree using a combination of system criteria, dynamically move machines into their appropriate group in your System Tree, and how to verify IP Integrity to ensure IP address sorting criteria does not overlap between different groups.

McAfee Agent

Define the McAfee Agent, explain its purpose and key characteristics and functions, and navigate the McAfee Agent interface.

System Information

View and interpret detailed information about your managed elements, customize your view, and view and customize System Monitors.

Recommended Pre-Work

- Working knowledge of Microsoft Windows and system administration, network technologies.
- Basic understanding of computer security concepts.

COURSE DESCRIPTION

Client Tasks

Describe the purpose of client tasks, communicate about client task concepts, access and navigate the Client Task Catalog, identify client task types, and add, duplicate, edit, schedule, and delete a client task.

Managing Policies

Describe the purpose of policies, create and edit policy objects, manage policy configuration and assignment, see policy inheritance in action, and enforce policy changes on client machines (endpoints).

Deploying Software for Managed Systems

Identify different methods used to acquire required software components, explain how the Software Manager works, install extensions and software components manually, check in required software components manually, distinguish between a Product Deployment Project and Client Task, and create a Product Deployment Project.

Repositories

Describe repository types and contents, explain the available branches for repositories; view the default repositories; create a source, fallback, distributed, SuperAgent, and unmanaged repository; modify the repository contents; and export the site list.

Product and Server Maintenance with Repositories

Update McAfee ePO software-managed systems with scheduled or manual client tasks, configure the Global Updating feature to automatically update McAfee ePO software-managed systems, manage McAfee ePO

software repositories with server pull and replication tasks, and describe ways to troubleshoot client update task failures.

Managing Dashboards and Monitors

Identify the purpose of dashboards and monitors, as well as features and capabilities, identify default dashboards included with McAfee ePO software, access the Dashboards page, duplicate a dashboard, add a dashboard, and edit and assign dashboard permissions.

Working with Queries and Reports

Query the McAfee ePO database, use the Query Builder to create your own queries, explain how Multi-Server Roll-Up Reporting is performed, configure query permissions, configure Multi-Server Roll-Up Query Permissions, and export query data for viewing outside of McAfee ePO software.

Automatic Responses and Notifications

Use Automatic Response rules to create alerts and perform pre-determined actions, configure Automatic Responses, list the Permission Sets for Automatic Responses, and describe how to configure contacts for notifications.

Database Maintenance and Server Utilities

Identify maintenance tasks that should be performed on a regular basis, identify the primary SQL Server and McAfee ePO software tools you can use for maintenance, identify the recommended database recovery model, explain how to back up and purge data, identify ways to automate maintenance, and identify general server tasks.

COURSE DESCRIPTION

Disaster Recovery

Describe the Disaster Recovery feature and how it works, use a Server Task for a Snapshot, take a Snapshot from the Dashboard, provide examples of Disaster Recovery scenarios, explain the differences between an McAfee ePO software initial installation and a recovery installation, and describe best practices for Disaster Recovery.

Agent Handlers

Explain Agent Handler functionality and benefits, describe Agent Handler deployment scenarios and plan Agent Handler deployment, install and configure Agent Handlers, assign McAfee Agents to Agent Handlers and manage assignments, and create and manage Agent Handler groups.

Rogue System Detection

Explain the purpose of Rogue System Detection and how it works, determine the best place to install sensors on your network, examine sensor detection results and statistics, create policies for Rogue System Detection, install sensors onto machines in your network, remove sensors from machines in your network, and view available Rogue System Detection queries.
