

McAfee ePolicy Orchestrator Administration (5.9)

McAfee® Education Services Guided On-Demand Training

The McAfee® ePolicy Orchestrator® Administration guided on-demand course from McAfee® Education Services offers you comprehensive and focused multimedia training from experienced instructors in a self-paced environment at your desk. The course delivers the same curriculum as the instructor-led training through virtual, on-demand coursework, recorded instructor presentations, use-case scenarios from McAfee best practices and experiences, and hands-on lab exercises. You'll have email access to the instructor to get your questions answered.

The course offers in-depth training on the benefits of the centralized management and deployment of McAfee products using McAfee ePolicy Orchestrator (McAfee ePO™) software. Enabling administrators to fully understand the capabilities of their security solution not only reduces the risks of misconfiguration, but also ensures that an organization gets the maximum protection from installation.

Audience

This course is intended for system and network administrators, security personnel, auditors, and/or consultants concerned with system endpoint security.

Agenda at a Glance

Modules 1-7

- Welcome
- McAfee ePO Software Overview
- Planning a McAfee ePO Software Deployment
- Installing McAfee ePO Software
- Managing Permission Sets and Users
- Creating and Populating the System Tree
- Using the Tag Catalog

Modules 8-12

- Sorting the System Tree
- McAfee Agent
- System Information
- Client Tasks
- Managing Policies

COURSE DESCRIPTION

Agenda at a Glance

Modules 13-18

- Deploying Software for Managed Systems
- Repositories
- Product and Server Maintenance with Repositories
- Managing Dashboards and Monitors
- Working with Queries and Reports
- Automatic Responses and Notifications

Modules 19-22

- Database Maintenance and Server Utilities
 - Disaster Recovery
 - Agent Handlers
 - Rogue System Detection
-

Recommended Pre-Work

- Working knowledge of Microsoft Windows and system administration and network technologies
- Basic understanding of computer security concepts

Learning Objectives

Welcome

Become familiar with McAfee information and support resources and feedback mechanisms.

McAfee ePO Software Overview

Describe McAfee ePO software features, functionality, and solution components and architecture.

Planning a McAfee ePO Software Deployment

Identify deployment considerations, describe deployment scenarios and solutions, identify McAfee ePO platform requirements, and discuss database sizing considerations.

Installing McAfee ePO Software

Identify installation requirements, recommendations, and best practices; distinguish between a new installation and a recovery installation; identify and distinguish between the different deployment options for a new installation; install McAfee ePO software; perform post-installation tasks; and identify configuration tools for the initial setup of the McAfee ePO software environment.

Managing Permission Sets and Users

Configure settings for personal settings, users, and permission sets; create a custom permission set; create users and assign permission sets; verify rights and access granted with permission sets; configure McAfee ePO software and Microsoft Active Directory user accounts; and configure user autcreation.

Creating and Populating the System Tree

Provide an overview of the McAfee ePO System Tree, use different methods for creating the System Tree, describe the various methods of organizing the System Tree, and create Permission Sets to let user accounts manage the System Tree.

Using the Tag Catalog

Learn the difference between tags without criteria (applied manually) and criteria-based tags (applied automatically and on demand); how to use the Tag Builder to create tags quickly; how to edit, delete, and move tags between tag groups; and how to enable permissions for other administrative users.

COURSE DESCRIPTION

Sorting the System Tree

Learn how to dynamically sort your machines into your McAfee ePO System Tree using a combination of system criteria, dynamically move machines into their appropriate group in your System Tree, and how to verify IP Integrity to ensure IP address sorting criteria does not overlap between different groups.

McAfee Agent

Define the McAfee® Agent, explain its purpose and key characteristics and functions, and navigate the McAfee Agent interface.

System Information

View and interpret detailed information about your managed elements, customize your view, and view and customize System Monitors.

Client Tasks

Describe the purpose of client tasks; communicate about client task concepts, access, and navigate the Client Task Catalog; identify client task types; and add, duplicate, edit, schedule, and delete a client task.

Managing Policies

Describe the purpose of policies, create and edit policy objects, manage policy configuration and assignment, see policy inheritance in action, and enforce policy changes on client machines (endpoints).

Deploying Software for Managed Systems

Identify different methods used to acquire required software components, explain how the Software Manager works, install extensions and software components manually, check in required software components manually, distinguish between a Product Deployment Project and Client Task, and create a Product Deployment Project.

Repositories

Describe repository types and contents, explain the available branches for repositories; view the default repositories; create a source, fallback, distributed, SuperAgent, and unmanaged repository; modify the repository contents; and export the site list.

Product and Server Maintenance with Repositories

Update McAfee ePO software-managed systems with scheduled or manual client tasks, configure the Global Updating feature to automatically update McAfee ePO software-managed systems, manage McAfee ePO software repositories with server pull and replication tasks, and describe ways to troubleshoot client update task failures.

Managing Dashboards and Monitors

Identify the purpose of dashboards and monitors, as well as features and capabilities; identify default dashboards included with McAfee ePO software; access the Dashboards page; duplicate a dashboard; add a dashboard; and edit and assign dashboard permissions.

COURSE DESCRIPTION

Working with Queries and Reports

Query the McAfee ePO database, use the Query Builder to create your own queries, explain how Multi-Server Roll-Up Reporting is performed, configure query permissions, configure Multi-Server Roll-Up Query Permissions, and export query data for viewing outside of McAfee ePO software.

Automatic Responses and Notifications

Use Automatic Response rules to create alerts and perform pre-determined actions, configure Automatic Responses, list the Permission Sets for Automatic Responses, and describe how to configure contacts for notifications.

Database Maintenance and Server Utilities

Identify maintenance tasks that should be performed on a regular basis, identify the primary SQL server and McAfee ePO software tools you can use for maintenance, identify the recommended database recovery model, explain how to back up and purge data, identify ways to automate maintenance, and identify general server tasks.

Disaster Recovery

Describe the Disaster Recovery feature and how it works, use a Server Task for a Snapshot, take a Snapshot from the Dashboard, provide examples of Disaster Recovery scenarios, explain the differences between a McAfee ePO software initial installation and a recovery installation, and describe best practices for Disaster Recovery.

Agent Handlers

Explain Agent Handler functionality and benefits, describe Agent Handler deployment scenarios and plan Agent Handler deployment, install and configure Agent Handlers, assign McAfee Agents to Agent Handlers and manage assignments, and create and manage Agent Handler groups.

Rogue System Detection

Explain the purpose of Rogue System Detection and how it works, determine the best place to install sensors on your network, examine sensor detection results and statistics, create policies for Rogue System Detection, install sensors onto machines in your network, remove sensors from machines in your network, and view available Rogue System Detection queries.
