

Will Remote Schooling be Safe?

It can with McAfee MVISION Mobile Advanced

Returning to school will look different for students all across the country this year.

Helping Where We Can

Protecting your educational outcomes is McAfee's #1 priority, especially during the back-to-school season. To find out how to deploy MVISION Mobile Advanced, contact your McAfee Account Manager or McAfee Authorized Channel Partner and ask for SKU# MV3ECE-AA-AI.

The New Classroom

With remote and hybrid learning now a new normal, the traditional school network has expanded into homes, spilled out onto kitchen tables, and overtaken basements and TV rooms. Parents and nearly 3.2 million teachers¹ are setting up virtual classrooms. And hackers have definitely taken notice.

What Devices are at Risk

Whether students and teachers have a laptop, tablet, Chromebook, iOS device, or a desktop computer, all devices are at risk. Between January 2020 – April 2020, the education community saw a 1,114% increase in cloud threats due to COVID-19 — making student devices a highly attractive and sought-after target for hackers.²

McAfee's **MSHIELD Mobile Advanced** is the first and only comprehensive, on-device, machine learning-based security solution. It utilizes real-time technology that detects and prevents attacks on millions of iOS and Android devices.³

MSHIELD Mobile Advanced Protects:

- **Student Information** – by keeping network data safe from phishing attacks
- **Cameras & Microphones** – by identifying and alerting malicious malware found in apps
- **Privacy & Misuse** – by assessing Android apps for privacy violations and student misuse
- **Wi-Fi Networks** – by detecting malicious networks and asking students to disconnect
