

McAfee Complete Data Protection—Advanced

Comprehensive data protection anywhere, anytime

Sensitive data is constantly at risk of loss, theft, and exposure. Many times, the data simply walks right out the front door on a laptop or USB device. Companies that suffer such a data loss risk serious consequences, including regulatory penalties, public disclosure, brand damage, customer distrust, and financial losses. According to a Ponemon Institute report, 7% of all corporate laptops will be lost or stolen sometime during their useful life.¹ The rapid proliferation of mobile devices with large storage capacities and often internet access is opening up even more channels for data loss or theft, so protecting sensitive, proprietary, and personally identifiable information must be a top priority. McAfee® Complete Data Protection—Advanced addresses all of these concerns and many more.

Key Features

- McAfee Data Loss Prevention Endpoint
- McAfee Device Control
- Drive encryption
- File and removable media protection
- Management of native encryption

Data Loss Prevention for Greater Control

Preventing data loss at the endpoint begins with improving visibility and control over your data, even when it is disguised. McAfee Complete Data Protection—Advanced enables you to implement and enforce company-wide security policies that regulate and restrict how your employees use and transfer sensitive data via common channels, such as email, IM, printing, and USB drives. It does not matter if they are in the office, at home, or on the move—you stay in control.

Enterprise-Grade Drive Encryption

Secure your confidential data with an enterprise-grade security solution that is FIPS 140-2 and Common Criteria EAL2+ certified and accelerated with the Intel Advanced Encryption Standard—New Instructions (Intel AES-NI) set. McAfee Complete Data Protection—Advanced uses drive encryption combined with strong access control via two-factor pre-boot authentication to prevent unauthorized access to confidential data on endpoints, including desktops, virtual desktop infrastructure (VDI) workstations, laptops, USB drives, CD/DVDs, and more.

Removable Media, File and Folder, and Cloud Storage Encryption

Ensure that specific files and folders are always encrypted, regardless of where data is edited, copied, or saved. McAfee Complete Data Protection—Advanced features content encryption that automatically and transparently encrypts the files and folders you choose on the fly—before they move through your organization. You create and enforce central policies based on users and user groups for specific files and folders without user interaction.

Management of Native Encryption

Management of native encryption allows you to manage the native encryption functionality offered by Apple FileVault on OS X and Microsoft BitLocker on Windows platforms directly from McAfee® ePolicy Orchestrator® (McAfee ePO™) software. Management of native encryption provides zero-day compatibility with Apple OS X and Microsoft Windows patches, upgrades, firmware updates from Apple, and zero-day support for new hardware from Apple. Management of native encryption allows administrators to manually import recovery keys where users have already enabled FileVault and BitLocker.

Centralized Security Management and Advanced Reporting

Use the centralized McAfee ePO software console to implement and enforce mandatory, company-wide security policies that control how data is encrypted, monitored, and protected from loss. Centrally define, deploy, manage, and update security policies that encrypt, filter, monitor, and block unauthorized access to sensitive data.

McAfee Complete Data Protection—Advanced Features

Device control

- Monitor and regulate how employees transfer data to removable media—even when they are not connected to the corporate network.

Data loss prevention

- Control how users send, access, and print sensitive data at the endpoint—physical or virtual, through applications, and onto storage devices.
- Stop confidential data loss initiated by Trojans, worms, and file-sharing applications that hijack employee credentials.
- Protect all data, formats, and derivatives, even when data is modified, copied, pasted, compressed, or encrypted.

Key Advantages

- Gain control over your data by monitoring and regulating how employees use and transfer data via common channels, such as email, IM, printing, and USB drives—both in and away from the office.
- Stop data loss initiated by sophisticated malware that hijacks sensitive and personal information.
- Secure data when it's stored on desktops, laptops, tablets, and in the cloud.
- Manage Apple FileVault and Microsoft BitLocker native encryption on endpoints directly from McAfee ePO software.
- Communicate with and take control of your endpoints at the hardware level—whether they are powered off, disabled, or encrypted—to halt desk-side visits and endless help desk calls due to security incidents, outbreaks, or forgotten encryption passwords.
- Prove compliance with advanced reporting and auditing capabilities. Monitor events and generate detailed reports that show auditors and other stakeholders your compliance with internal and regulatory privacy requirements.

DATA SHEET

Enterprise-grade drive encryption

- Automatically encrypts entire devices without requiring user action or training or impacting system resources
- Identifies and verifies authorized users using strong multifactor authentication
- Supports Intel Software Guard Extensions (Intel SGX)
- Compatible with third-party credential providers
- In-place upgrade support for Windows 10 Anniversary Update

Removable media encryption

- Automatic, on-the-fly encryption for virtually any mobile storage device, company issued or not
- Access to encrypted data anywhere without the need for any additional software

File, folder, and cloud storage encryption

- Secured files and folders wherever they are saved, including local hard disks, file servers, removable media, and cloud storage, such as Box, Dropbox, Google Drive, and Microsoft OneDrive

McAfee Complete Data Protection—Advanced Specifications

Microsoft Windows operating systems

- Microsoft Windows 7, 8, and 10 (32-bit/64-bit versions)
- Microsoft Vista (32-bit /64-bit versions)
- Microsoft Windows XP (32-bit version only)
- Microsoft Windows Server 2008
- Microsoft Windows Server 2003 (32-bit version only)
- Hardware requirements
 - CPU: Pentium III 1 GHz or higher laptop and desktop computers
 - RAM: 512 MB minimum (1 GB recommended)
 - Hard disk: 200 MB minimum free disk space

Apple Mac operating systems

- Mac OS X El Capitan, Yosemite, Mountain Lion, and Mavericks
- Hardware requirements
 - CPU: Intel-based Mac laptop with 64-bit EFI
 - RAM: 1 GB minimum
 - Hard disk: 200 MB minimum free disk space
- Centralized management

DATA SHEET

Manage native encryption on Macs and Windows

- Manage FileVault on any Mac hardware that can run OS X Mountain Lion, Mavericks, Yosemite, and El Capitan directly from McAfee ePO software.
- Manage BitLocker on Windows 7, 8, and 10 systems directly from McAfee ePO software, without the need for a separate Microsoft BitLocker Management and Administration (MBAM) server.

Centralized management console

- Use the McAfee ePO software infrastructure management to manage full-disk, file and folder, and removable media encryption; control policy and patch management; recover lost passwords; and demonstrate regulatory compliance.
- Synchronize security policies with Microsoft Active Directory, Novell NDS, PKI, and others.
- Prove devices are encrypted with extensive auditing capabilities.
- Log data transactions to record such information as sender, recipient, timestamp, data evidence, and date and time of last successful login.
