

McAfee MVISION Endpoint

Advanced endpoint security for Microsoft environments

Organizations looking for simpler, more affordable alternatives to full-featured endpoint security platforms (EPP) are embracing native security like Windows Defender. While Defender provides essential base-level protection, it's still necessary to apply advanced countermeasures like machine learning to mount a complete defense against sophisticated fileless and zero day malware-based threats. The key to success lies within leveraging, strengthening, and managing the security already built into Windows 10 without introducing the complexity of multiple consoles.

Security or Complexity?

Because these tools are usually managed separately, security teams are faced with the dilemma of whether to get a stronger defense at the cost of adding complexity. Typically, this also means eliminating the financial and operational savings they had hoped to gain.

A better choice: advanced defenses and cohesive management

With McAfee® MVISION Endpoint, you can eliminate the dilemma of effectiveness or efficiency by getting both. You get file, fileless, and behavioral machine learning analysis for advanced threat detection and centralized management for every endpoint in your environment. You can also avoid complex workflows,

thanks to a consistent and centralized console for policy management of Windows Defender, McAfee defenses, and Mac or Linux systems. Co-management not only removes redundant entry time, it improves your visibility into your endpoint environment.

Maximize your defenses

McAfee MVISION Endpoint delivers enhanced detection and correction capabilities to augment native controls, which are always up to date. Machine learning, credential theft monitoring, and rollback remediation substantially boost the basic security built into the Windows 10 operating system (OS) and effectively combat advanced, zero-day threats. This approach lets you avoid the tricky questions of whether to invest in native or third-party technologies by aligning and giving you the best of both.

Key Advantages

- **Advanced defenses for advanced threats:** Machine-learning, credential theft defense, and rollback remediation complement Windows 10 basic security capabilities
 - **No additional complexity:** Centralized policy management of Windows Defender and McAfee defenses.
-

A unified defense that leverages, strengthens, and manages the base security of Windows 10

Connect With Us

Recover time

McAfee machine learning technology offers a much higher detection rate than signature-based defenses alone, with fewer false positives than competing solutions. This helps keep administrators focused on the real threats in their environments, rather than on exonerating the non-malicious.

McAfee MVISION Endpoint is also able to monitor and restore the original versions of files impacted by suspicious processes and to remove other malicious files or processes that may have been introduced. For users, this means they remain productive rather than dealing with downtime during remediation and recovery. For administrators, that means less time spent on re-imaging or recovering compromised endpoints and more time spent on making their organization productive.

Get more visibility

McAfee MVISION Endpoint is managed using a single pane of glass that gives visibility into your environment for both threats and compliance. Instead of pivoting from one console to another to connect the dots on what, where, and how a threat event happened, an easy-to-use dashboard and configurable alerts guide you to the data that is most important.

Management flexibility

McAfee MVISION Endpoint offers a choice of:

- **Pure SaaS Management:** Multitenant, globally scaled, and maintained by McAfee.
 - *Benefits:* Anytime, anywhere access to the management console, automatic updates, and management maintenance for a lower total cost of ownership (TCO).
- **Virtual deployment:** Fully operational in less than an hour with management deployed in an Amazon Web Services (AWS) environment.
 - *Benefits:* Leverage existing investments in virtualized environments to lower your deployment and maintenance costs while retaining customized control.
- **Local deployment:** An on-site, locally installed deployment of the management software on a server.
 - *Benefits:* Customers can use existing deployments and manage multiple McAfee technologies centrally.

Get Started Quickly

- Out-of-the-box policies are applied to your Defender environment.
- Use existing McAfee management or deploy rapidly using a SaaS-based console.
- A small client size makes downloads light and fast.

DATA SHEET

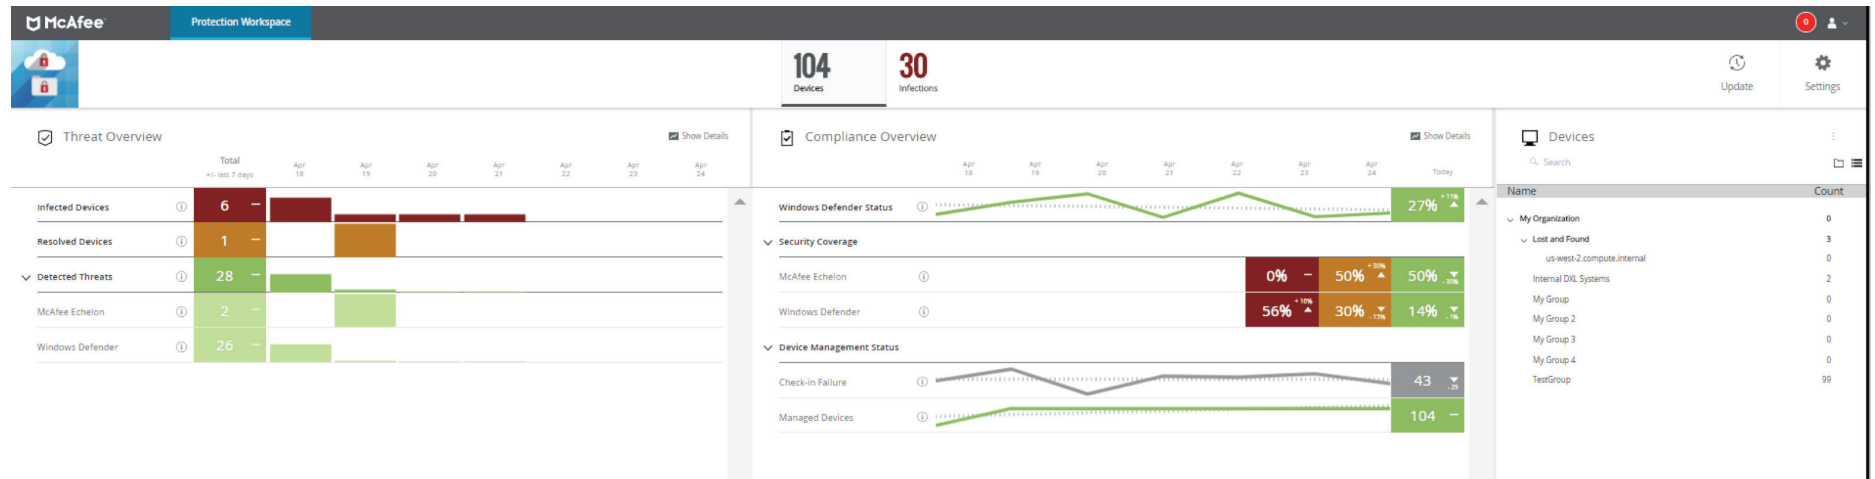

Figure 1. The threat protection workspace allows you to view threats and compliance across McAfee and Microsoft technologies.

Designed for Performance

McAfee MVISION Endpoint has an incredibly small and lightweight footprint, as many of its capabilities are delivered through cloud-based services. Getting started can happen rapidly as a result, and the client file size is small, so your download time is short and the impact to your bandwidth is light.

Once installed, no updates are required for your defenses, and any future updates will occur automatically, with no action required by an administrator to install them.

The impact to your endpoint environment and your users is kept minimal through default-balanced performance settings that scale the need for computing power and bandwidth as needed instead of remaining in an always-on state.

Part of McAfee MVISION

A unified platform for your entire environment

With the growth of bring-your-own-device (BYOD), mobile, and Internet of Things (IoT) devices, many organizations need protection for other operating systems and types of devices. To address this growing complexity, McAfee has introduced MVISION which is a new strategic charter and innovative security technology portfolio focused on simplified management, stronger Windows security, machine learning, and expanded coverage in mobile.

The McAfee MVISION technology portfolio delivers a cloud-first approach to device security that empowers security professionals to manage a comprehensive array of McAfee, third-party, and native operating systems (OS) through a single point of visibility and control.

With McAfee MVISION, you get the protection you need across the entire attack surface: desktops, laptops, tablet, mobile, physical/virtual servers, cloud workloads, and IoT.

What can it do for your business?

- Centralized management for all devices
- Advanced, file, fileless, and behavioral machine learning defenses
- Protection for your Mac, Linux, IoT, and mobile devices
- Lower your TCO and streamline workflows

Why should you choose McAfee?

- Do more, do it faster, and with fewer clicks
- The industry's only vendor to offer combined management and pre-tuned advanced defense for native controls
- Visibility across your entire device environment
- A large, open ecosystem with multiple integrations
