

SOFTWARE ASSET MANAGEMENT PROGRAM

Our Software Asset Management Program provides you with the option to perform a license review to gain visibility of your current deployment prior to your support expiry date.

This review ensures that your support entitlement and node count match our records and that your company remains in compliance with the terms of the McAfee End User License Agreement.

There are many benefits to having a process or a tool to help you manage and optimise your software assets. Changes in IT environments can result in over or under deployment of licenses. While often unintentional, this can result in non-compliance if left unresolved. Using McAfee ePolicy Orchestrator (ePO), you can easily obtain the reports that provide a count of nodes in use and managed by ePO. The instructions can be found in the link below:

<https://www.mcafee.com/enterprise/en-us/downloads/epo-instructions-emea.html>

Following receipt of your ePO reports, we can send you an analysis of your current deployment. We can then work with you, your account manager and your preferred partner to ensure that you are provided with the correct product(s) and number of licenses to meet your future security requirements.

If you would like to avail of this tool, please contact your LCS representative.
