

This is your day: A constant struggle to stay ahead of security threats.

Do more with the hours in your day, and the dollars in your budget.

Every day cybercriminals steal any data they can profit from. Every day, you work to detect and protect against new types of attacks. You may try more and more security solutions. But that just adds more to manage.

Now there's a way for security professionals like you to deal with both security and complexity, and get more done with the hours in your day and the dollars in your budget.

Morning

You start your day with new types of attacks

70-90% of malware samples detected were **unique to the organizations they were targeting.**

27% of attacks in 2014 were the result of a **targeted attack.**

327 new threats happen **every minute**, or more than 5 every second.

Afternoon

By the middle of the day, the cost of breaches is growing

\$3.79M is the **average cost** of a breach.

98 days is the mean time to **detect a breach** at a financial institution.

31 days is the average time it takes a large organization to **clean up and remediate** after a cyber-attack, at a cost of \$20,000/day.

Evening

By the end of the day, you know you need a single, integrated solution

1 web interface that aligns security processes for **maximum visibility**, with a single agent to reduce the risk of endpoint conflicts.

1 server that can support hundreds of thousands of devices with an **enterprise-class architecture.**

1 management solution for **on-premises and cloud-based platforms.**

McAfee® ePolicy Orchestrator® software lets you do more with the hours in your day

41%

less time **deploying, monitoring, and reporting security policies.**

45%

less time **developing security reports for analysis.**

31%

less time **responding to security incidents.**

And **\$423,000** more with your budget over a 3-year period

(Based on 1,000 nodes)

12%

time saved on **client task automation and endpoint policy assignment.**

33%

time saved on **internal security reporting and compliance audits.**

16%

time saved on **patching.**

40%

time saved **fixing and managing incidents, events, and policies.**

McAfee ePO™ provides a **"single pane of glass"** for highly scalable, flexible, and automated centralized oversight and enforcement of security management policies to identify and respond to security issues and threats from either a premises-based or cloud-based platform.

Find out why more than 30,000 customers use **McAfee ePO™ software** on almost 70 million nodes.

Go to www.mcafee.com/epo to learn more.
