

# McAfee VirusScan for Mac

Although Apple Macintosh systems have been targeted less frequently than Microsoft Windows systems, they are not immune to cyberthreats. With the number of threats growing almost daily, it is critical that you guard all of your assets—including Macintosh computers—from viruses and malicious code. Leverage the award-winning Intel® Security scan engine with McAfee® VirusScan® for Mac, which will allow you to proactively hunt down and kill Macintosh and Windows viruses, worms, Trojans, and other threats. Automatic virus updating and cleaning protects your Macs against infected Internet downloads, such as spyware, adware, and other unwanted threats.

With McAfee VirusScan for Mac, users continue to work uninterrupted, thanks to non-intrusive, effective protection. Trusted by educational institutions and businesses alike, McAfee VirusScan for Mac has more than two million users worldwide.

## **Complete, Proactive Threat Protection**

McAfee VirusScan for Mac uses on-access scanning to search for viruses and malicious threats every time a file is accessed. It automatically detects viral infections as they attempt to infect a system and protects against Macintosh, PC, and UNIX viruses. In addition, it has the ability to scan Apple Mail messages and attachments for malicious threats. It will also protect your users when they save or open files from network share drives.

## **Protection from Tomorrow's Threats**

McAfee VirusScan for Mac uses heuristic analysis and generic detection to proactively protect against new and previously unknown viruses. The advanced heuristic analysis looks through the code in a file to determine if the actions it takes are typical of a virus. The more virus-like code found, the more likely the file is to be infected. To reduce the risk of false alarms, our positive heuristics approach is combined with negative heuristics, which searches for those things that are distinctly non-virus-like.

## **Centralized Management**

McAfee VirusScan for Mac can be managed by McAfee® ePolicy Orchestrator® (McAfee ePO™) software. McAfee ePO software provides centralized deployment, policy configuration, and enforcement, as well as detailed reporting for McAfee VirusScan for Mac clients. Centralized management lets your business run efficiently and cost effectively.

## **Universal Deployment**

McAfee VirusScan for Mac uses Macintosh's Universal Binary, which allows you to install on either Intel-based or Power PC-based Macintosh systems. Now you can get the same level of protection, regardless of which processor you are running. This universal binary makes it easy to deploy; just install it, and McAfee VirusScan for Mac will automatically run at peak performance to protect your systems.

## **Flexible Scheduling Options for On-Demand Scans and Updating**

Schedule tasks easily with McAfee VirusScan for Mac. You will save time and help keep tasks from being forgotten. You can also schedule full disk scans to run at convenient intervals, such as overnight or during off-peak hours. The manual option of McAfee VirusScan for Mac or the scheduler task can be used to scan disk volumes and folders to search out hidden threats.

### System Requirements

Note: The following are general system requirements and may vary depending on the nature of your environment.

McAfee VirusScan for Mac:

- Apple Mac OS X v.10.6
- (Snow Leopard) or later
- Apple Mac OS X v.10.5 (Leopard) or later
- Apple Mac OS X v.10.4 (Tiger) or later
- Intel or PowerPC-based Mac
- 1 GB RAM or higher
- Minimum 300 MB of free disk space (500 MB recommended)

### Always Up to Date with eUpdate

McAfee VirusScan for Mac automatically downloads updates from our website for full compliance and the latest protection against viruses, worms, and other malicious code. You'll find it easy to schedule daily or weekly automatic updates, resulting in automatic updating and cleaning that protects against infected Internet downloads and prevents countless hours of wasted time expended to recover and recreate lost work.

### Easy-to-Use Interface

McAfee VirusScan for Mac uses Apple's Mac OS X Aqua, which provides users with a familiar, easy-to-use interface. The McAfee VirusScan for Mac OS X Aqua interface makes configuration more intuitive for new users, while providing powerful and customizable options for power users.

### McAfee Labs

Our leading researchers combine world-class malicious code and antivirus research with intrusion prevention and vulnerability research expertise. McAfee Labs protects you with remediations developed through the combined efforts of McAfee Labs researchers and McAfee Labs AutoImmune technology, which applies advanced heuristics, generic detection, and ActiveDAT technology to generate cures for previously undiscovered viruses.

### Intel Security Solution Services

Along with Intel Security Alliance partners, Intel Security offers a wide variety of services to help you assess, plan, deploy, tune, and manage your security.

### Technical Support

Make sure that everything runs smoothly during and after installation with flexible programs from McAfee Technical Support. Our highly skilled and certified security specialists have a wealth of knowledge and resources to meet your security needs.
