

# About Intel Security

## Intel Security Facts

- 6,768 employees
- 120 countries
- 130+ Innovation Alliance partners
- 250 threat researchers
- 800+ security patents
- 188 million total endpoints
- 90 million corporate endpoints
- 200 million consumer users
- 90% of Fortune 100 firms
- 82% of Fortune 500 firms
- 62% of Global 2000 firms
- 82% of world's largest banks
- 74% of Global Top 500 retailers

## A Leader in Five Gartner Magic Quadrants

- Endpoint Protection Platforms
- Intrusion Prevention Systems
- Mobile Data Protection Solutions
- Enterprise Data Loss Prevention
- Security Information and Event Managements (SIEM)

[Learn More About Intel®](#)

Intel Security, with its McAfee product line, is dedicated to making the digital world safer and more secure for everyone. Our integrated, automated open security platform increases protection, reduces response times, and maximizes speed and resources, letting you focus on your security and business outcomes. Overcome visibility and control challenges anywhere in the digital landscape with our next-generation architecture. Our standardized integration and communication fabric connects and automates disparate technologies. Intel Security offers true centralized management, applied threat intelligence, and real-time collaboration across the entire threat defense lifecycle. Intel Security is a division of Intel Corporation.

## Customers

Intel Security customers range from government agencies to millions of home users. Businesses range from the smallest startups to the largest enterprises. Home users buy Intel® Security technology online and from retail stores around the world, or they get protection through cell phone carriers, Internet service providers (ISPs), their device maker, or other Intel Security partners.

Most of our corporate customers buy through Intel Security-authorized partners who customize solutions to bring them the right protection for their specific needs delivered as software, appliances, or as a service in the cloud. Intel Security's integrated platform helps our customers achieve optimized security each day, enabling their business while reducing risk, driving compliance, and realizing operational efficiencies.

## Markets

### Home

Intel Security secures home PCs, tablets, phones, and connected devices with easy-to-use, effective solutions. Millions of consumers rely on our solutions, which include an online subscription service that keeps protection up to date and provides them with the latest technology. Intel Security products shield consumers from identity theft, phishing scams, spyware, malicious websites, and other threats that endanger the online experience.

### Small business

The Intel Security portfolio of integrated solutions and services for small business provides always up-to-date protection for desktops, servers, and networks. With a focus on providing Security-as-a-Service, we give small businesses the confidence of having full-time security expertise without the need to hire IT staff. Our easy-to-manage products protect small businesses against a wide array of threats, including malware, spam, and unauthorized network access.

### Executive Management

**Christopher Young**  
SVP, General Manager

**Allison Cerra**  
VP, Marketing

**Brian Dye**  
CVP & GM, Corporate Products

**Tom Fountain**  
VP, Strategy & Business Development

**John Giamatteo**  
CVP & GM, Consumer

**Steve Grobman**  
Intel Fellow, CTO

**Patty Hatter**  
VP & GM, Professional Services

**Scott Lovett**  
CVP, Global Sales

**Barry McPherson**  
VP, Support, Supply Chain, & Facilities

### Commercial

Mid-sized businesses with more than 250 users generally have full-time IT staff but don't have much time or budget to spend on security. Intel Security offers growing businesses smart, simple, and secure solutions that provide better protection and are easy to manage.

### Enterprise

Large businesses can optimize their security investments and proactively protect their most important assets with our integrated, automated security platform. The Intel Security approach to providing integrated security has become the de facto standard for enterprise security, with solutions to protect the entire infrastructure—endpoints, network, web, mobile and embedded devices, and cloud. Our solutions also help enterprises manage risk and meet regulatory, industry, and internal compliance demands more effectively and efficiently. IT professionals use our methodology—from policy creation to protection strategies to compliance reporting—to determine the right level of security for their organizations.

### Mobile

Intel Security mobile security solutions safeguard devices such as smartphones, tablets, and corporate networks. Our mobile security offerings enable businesses to securely manage mobile devices and the corporate data on them. We help consumers protect their mobile devices and personal data from theft or loss. We also help mobile operators protect their users and networks against mobile malware.

### Cloud

Intel Security Cloud Services Platform addresses the challenges of today's public, private, and hybrid clouds. Our integrated lifecycle defense protect workloads in physical, virtual, and public cloud datacenters. With Intel Security you can monitor, segment, and secure the hybrid cloud-to-endpoint workload stack.

Our platform leverages cloud-based security services to safeguard users, data, and devices. Unified management, operational efficiencies, and streaming workflows centralize visibility, comprehension, and control. Our cloud strategy delivers operational excellence, risk mitigation, and business agility and cost reduction.

### Integrated, Simple-to-Manage Solutions

From phishing scams to cyberespionage, information security threats continue to grow increasingly sophisticated and complex. Today's security challenges include ransomware, spam, spyware, data loss, host intrusion, management, mobile malware, social networking exploits, phishing scams, and threats that target Web 2.0 applications.

Every device is a potential target and entry point. McAfee Labs, our global security research team, identified 41 million new pieces of malware in Q2 2016—around 316 new threats every minute, or more than five every second. Many of these multi-vectored threats exploit vulnerabilities in networks and systems. Defending against these exploits requires integrated protection.

With the most comprehensive security portfolio in the industry, Intel Security delivers proactive, integrated protection for networks, systems, data, and the web backed by 24/7 threat research from McAfee Labs and real-time data from McAfee® Global Threat Intelligence to anticipate and defend against the next wave of malware.

Our portfolio provides single-console, centralized management with McAfee ePolicy Orchestrator® software to optimize security investments by improving operational efficiencies and protection. The McAfee ePolicy Orchestrator management platform helps organizations keep systems compliant and manage interdependent layers of protection. Customers can feel confident in knowing they are covered around the clock and around the world.

### Professional Services and Support

Intel Security Professional Services, including consulting, product education, and award-winning technical support, help customers make the most of their Intel Security solutions and keep protection up to date.

We work with highly trained and experienced partners to help customers optimize our solutions. Foundstone® Services brings an objective perspective and a unique combination of tools and training to help identify and implement the most effective solutions to meeting our customers' particular needs.

Through Intel Security Customer Service and Technical Support, our customers have access to expert support delivered by certified security specialists, along with a wealth of other resources, including an in-depth knowledgebase. Support options include 24/7/365 access, response charters, and proactive optimization.

### Research

McAfee Labs is one of the world's leading sources for threat research, threat intelligence, and cybersecurity thought leadership. With millions of sensors across key threat vectors—file, web, message, and network—McAfee Labs delivers real-time threat intelligence, critical analysis, and expert thinking to improve protection and reduce risk.

### Innovation

McAfee Global Threat Intelligence offers the most comprehensive threat intelligence on the market. Powered by a worldwide network of threat sensors and backed by a global, dedicated research team, this gives users visibility across all threat vectors—file, web, message, and network—and across the IT industry. Unlike traditional protection models that rely on patches and signatures that can take days to deploy, McAfee Global Threat Intelligence protects your organization instantly and often predictively, before a threat even reaches your organization. This means better detection, fewer security incidents, and less cost remediating and repairing systems.

McAfee Data Exchange Layer provides a standardized integration and communication layer for all products to leverage, regardless of their underlying proprietary architecture. It dramatically simplifies integrations with a one-time setup, while encouraging open vendor participation. McAfee Data Exchange Layer unites disparate technology solutions, across multiple vendors, to enable instant communication and collaboration. It is a bi-directional, open communication platform connecting your security solutions into a single ecosystem. With this increased speed, agility, and scalability you strengthen the foundation for threat detection and response across the IT landscape.
