

McAfee vPatch Security Update

McAfee vPatch Security Update 65

McAfee vPatch Security Update 65

This vPatch Security Update follows major vendors update:

- Added rules 6418, 6420, 6422 and 6424 for Oracle to detect exploitation of CVE-2014-6541, CVE-2015-0371, CVE-2014-6567 and CVE-2014-6578 reported in January 2015 CPU
- Added rules 8068 and 8070 for Sybase to detect exploitation of CVE-2013-6245 and CVE-2013-6865 respectively
- Added rule 8625 for DB2 to address a Zero Day vulnerability discovered by McAfee/Sentriigo team
- Added rule 8624 for DB2 to detect exploitation of CVE-2012-0713
- Added rule 5761 for MSSQL to replace rule 5760 due to False-Positives detection. 5760 can be enabled to restore previous behavior.
- Added rule 7851 for MSSQL to detect suspicious activity: Account Enumeration using SUSER_NAME
- Updated metadata for rule 6414 (CVE-2014-6514) reported in January 2015 CPU
- Updated rule 5760 for MSSQL (is now disabled by default)
- Improved detection logic for rules 5730 and 6362 to reduce False-Positives
- Updated metadata for numerous additional rules

Current update is cumulative and includes the content of all previously released vPatch updates.

Previous release notes can be found [here](#).
