

McAfee vPatch Security Update

McAfee vPatch Security Update 63

This vPatch Security Update is released after major vendor updates:

- Added rules 8060 and 8062 for Sybase to detect exploitation of CVE-2013-6864, CVE-2013-6025
- Added rules 8064 and 8066 for Sybase to detect exploitation of CR# 689823 and suspicious activity
- Added tag 'Disabled By Default' to relevant rules
- Added rule 1821 (disabled by default) to detect usage of DBSNMP account
- Updated rule 1376 to detect recently reported Oracle DB JavaVM vulnerabilities in October 2014 CPU
- Update metadata for rule 1160 which addresses a vulnerability covered in October 2014 CPU
- Updated metadata for rules 6386, 6388, 6390 and 6396 which detect exploitation of Oracle EM vulnerabilities covered in October 2014 CPU
- Updated rule 1820 to exclude DBSNMP account to reduce excessive alerts
- Improved detection logic for rules 5647 and 3068
- Updated metadata for numerous additional rules

Current update is cumulative and includes the content of all previously released vPatch updates.

Previous release notes can be found [here](#).
