

MCAFFEE FOUNDSTONE FSL UPDATE

To better protect your environment McAfee has created this FSL check update for the Foundstone Product Suite. The following is a detailed summary of the new and updated checks included with this release.

NEW CHECKS

19428 - Inadvertently Disclosed Digital Certificate Could Allow Spoofing (3123040)

Category: Windows Host Assessment -> Patches Only
(CATEGORY REQUIRES CREDENTIALS)

Risk Level: Medium

CVE: CVE-MAP-NOMATCH

Description

A spoofing vulnerability is present in some versions of Microsoft Windows.

Observation

Microsoft Windows is an industrial standard operating system.

A spoofing vulnerability is present in some versions of Microsoft Windows. The flaw occurs due to a digital certificate for *.xboxlive.com that the private keys were inadvertently disclosed. Successful exploitation could allow an attacker to perform man-in-the-middle attacks.

HOW TO UPDATE

FS1000 APPLIANCE customers should follow the instructions for Enterprise/Professional customers, below. In addition, we strongly urge all appliance customers to authorize and install any Windows Update critical patches. The appliance will auto-download any critical updates but will wait for your explicit authorization before installing.

FOUNDSTONE ENTERPRISE and PROFESSIONAL customers may obtain these new scripts using the FSUpdate Utility by selecting "FoundScan Update" on the help menu. Make sure that you have a valid FSUpdate username and password. The new vulnerability scripts will be automatically included in your scans if you have selected that option by right-clicking the selected vulnerability category and checking the "Run New Checks" checkbox.

MANAGED SERVICE CUSTOMERS already have the newest update applied to their environment. The new vulnerability scripts will be automatically included when your scans are next scheduled, provided the Run New Scripts option has been turned on.
